Facebook 'operating in the shadows' says whistleblower as U.S.

WASHINGTON, Oct 5 (Reuters) - U.S. lawmakers pounded Facebook (FB.O) on Tuesday, accusing CEO Mark Zuckerberg of pushing for higher profits while being cavalier about user safety and they demanded regulators investigate whistleblower accusations that the social media company harms children and stokes divisions.

During a Senate Commerce subcommittee hearing, whistleblower Frances Haugen called for transparency about how Facebook entices users to extend their stay on the site, giving them ample opportunity to advertise to them.

"As long as Facebook is operating in the shadows, hiding its research from public scrutiny, it is unaccountable," said Haugen, a former employee of the nearly $1 trillion company who turned whistleblower.

"The company's leadership knows how to make Facebook and Instagram safer, but won't make the necessary changes because they have put their astronomical profits before people. Congressional action is needed," Haugen said.

In an era when bipartisanship is rare in Washington, lawmakers from both parties excoriated the company, illustrating the rising anger in Congress with Facebook amid numerous demands for legislative reforms.

Senator Dan Sullivan, a Republican, said he was concerned about how Facebook and subsidiaries like Instagram affected the mental health of children. "I think we're going to look back 20 years from now and all of us are going to be like 'what the hell were we thinking?'"

Haugen revealed she was the one who provided documents used in a Wall Street Journal investigation and a Senate hearing on Instagram's harm to teenage girls. She compared the social media sites to addictive substances like tobacco and opioids.

Panel chair Senator Richard Blumenthal, a Democrat, said Facebook knew that its products were addictive. "Tech now faces that big tobacco jaw-dropping moment of truth," he said.

Report ad
He called for Zuckerberg to testify before the committee, and for the Securities and Exchange Commission and Federal Trade Commission to investigate the company.

"Our children are the ones who are victims. Teens today looking in the mirror feel doubt and insecurity. Mark Zuckerberg ought to be looking at himself in the mirror," Blumenthal said.

Blumenthal said after the hearing that he would want to ask Zuckerberg why he rejected recommendations to make the company's products safer for users.

SHARES UP

Despite the criticism, Facebook's share price was up 2.2% at $333.43 in the mid-afternoon on Tuesday.

Former Facebook em-
ployee and whistleblower Frances Haugen speaks with Sen. Richard Blumenthal (D-CT) during a Senate Committee on Commerce, Science, and Transportation hearing entitled 'Protecting Kids Online: Testimony from a Facebook Whistleblower' on Capitol Hill, in Washington, U.S., October 5, 2021. Facebook's stock through previous crises
Facebook's stock through previous crises

Coming a day after Facebook suffered an hours-long outage, Haugen pointed to the breakdown in her testimony: "For more than five hours Facebook wasn't used to deepen divides, destabilize democracies and make young girls and women feel bad about their bodies." read more

As lawmakers criticized Facebook and Zuckerberg, the company's spokespeople fought back on Twitter, arguing Haugen did not work directly on some of the issues she was being questioned on.

Haugen, a former product manager on Facebook's civic misinformation team, left the company with tens of thousands of confidential documents.

Senator Marsha Blackburn, a Republican, accused Facebook of turning a blind eye to children below age 13 on its sites. "It is clear that Facebook prioritizes profit over the well-being of children and all users," she said.

Lena Pietsch, a Facebook spokeswoman, disputed Haugen's knowledge of the company's inner workings. "We don't agree with her characterization of the many issues she testified about," Pietsch said in a statement.Last week, Antigone

Former Facebook employee and whistleblower Frances Haugen testifies during a Senate Committee on Commerce, Science, and Transportation hearing entitled 'Protecting Kids Online: Testimony from a Facebook Whistleblower' on Capitol Hill, in Washington, U.S., October 5,

Davis, Facebook's global head of safety, defended the company in front of Congress and said that it was seeking to release additional internal studies in an effort to be more transparent about its findings. read more

Senator Maria Cantwell, chair of the Commerce Committee, said she would write a letter to Facebook to insist that it not delete documents related to Myanmar's persecuted Muslim minority Rohingya. An aide said she would ask for broader retention of documents.

Haugen said she would encourage "oversight and public scrutiny" into how the content algorithms work and the consequences of them. She suggested creating a dedicated body within the federal government to oversee social media companies.

We All Need To Participate In Politics

It was my honor to receive Ft. Bend County Democratic Chairwoman Cynthia Ginyard and Pastor Gregg Patrick in our office. We gave them a tour and discussed a lot of community issues.

I also want to point out how important it is for members of our community to participate in the political process, especially at the local level.

Pastor Patrick is running for Alief ISD Trustee Position # 7. This is our district which is also in our International District.

The pastor's vision is to "secure more educational benefits and educational facilities for administrators, teachers and students of Alief ISD and increase the availability of new technology and improve current educational infrastructure and acquire necessary finances through the creation of bond issues and business partnerships to meet the ever–evolving needs of Alief ISD."

After our conversation we decided to fully support Pastor Gregg Patrick in his run for Alief ISD Trustee Position # 7.

We are also planning a town hall meeting with Congressman Al Green on the upcoming Friday at 3:00 pm in our TV studio to discuss additional issues facing our community.

BUSINESS

A Pictorial Essay

A Brief History Of Vaccine Delivery Through The Years

In January 1929, Dr. L.E. Bensom of Los Angeles used his vacation to mush to native villages in Alaska. At the close of a particularly hard day on the trail, he found himself with 70 patients on his hands, all suffering from smallpox. There were 100 people in the village with no medical facilities. Bettmann/Getty Images

Compiled And Edited By John T. Robbins, Southern Daily Editor

Vaccines delivered by drones and by burros. People who shout about the danger of vaccines and refuse to get a jab. Public health campaigns to convince the vaccine hesitant. Public criticism of a failure to provide vaccines for lower-income countries and marginalized populations.

These are all part of the unprecedented world vaccination campaign now going on.

They're also the hot-button topics that go back to the very first vaccine — for smallpox in 1796.

Dr. Sergen Saracoglu (left) and nurse Yilzdiz Ayten (center) arrive at the village of Guneyyamac in Turkey on Feb. 15 as part of an expedition to vaccinate residents 65 years and over with Sinovac's CoronaVac COVID-19 vaccine. (Photo/Bulent Kilic/AFP via Getty Images)

In photographs and illustrations from past and present vaccine campaigns, you can see both the similarities and the striking contrasts.

James Colgrove, a professor of sociomedical sciences at Columbia University, and Sanjoy Bhattacharya, a professor of history at the University of York and director of the WHO Collaborating Centre for Global Health Histories, helped us out with historical context to go along with the images.

The vaccine has been created. Now how to get it where it needs to go?

Getting a vaccine from point A to point B has been a logistical problem since the very start with the smallpox vaccines, Bhattacharya says.

Back then, it was a painstaking process. Liquid was usually taken from an open smallpox sore, dried and mixed with water when ready to vaccinate. But transportation delays would sometimes render the vaccine ineffective. (The method had a shelf life of weeks to months — not a long time considering the transport options at the time.)

In 1900, a young cow is tied onto a table waiting for the extraction of pox sore to be used for vaccines for smallpox. (Photo/Berliner Illustrations Gesellschaft/ullstein bild via Getty Images)

The solution? Medical teams would take children (in one case, orphans were used to transport the virus from Spain to its colonies) and animals (such as cows and horses) from village to village or from country to country, harvesting liquid from smallpox or cowpox sores and getting it under the skin of an unvaccinated person. But that was clearly not a sustainable practice, Bhattacharya says, for ethical and scientific reasons.

Many years of innovation followed, including the development of freeze-dried vaccines. The COVID-19 vaccine world is dependent on cold chain technology that uses super freezers to keep vaccines at temperatures as low as minus 13 degrees Fahrenheit while they make their way on planes, trains and automobiles.

Ousseynou Badiane, the head of Senegal's vaccination program, stands in front of newly built cold rooms at Fann Hospital in Dakar, Senegal, in January. These cold rooms may be used to help store the country's stock of COVID-19 vaccines. (John Wessels/AFP via Getty Images)

Relying on cold storage technology is still not a perfect system.

The challenge has always been the greatest in poor and rural areas. "You have to make sure you have generators to maintain refrigerators," Colgrove says. It is the same problem countries are having with the COVID-19 vaccine today.

Left: A West German Navy vessel hands over vaccines to the U.S. transport General Patch in July 1957 for people sick with the Asiatic flu. The ship was anchored off Bremerhaven, West Germany, after a flu outbreak. Right: Health workers use a speedboat to make their way to vaccinate Quilombo communities against COVID-19 in Oriximiná, Brazil, in February. (Photo/Henry Brueggemann/AP; Tarso Sarraf/AFP via Getty Images)

Vaccine inequity is "just one part of a larger picture of inequity," Colgrove says. "People have been unvaccinated for the same set of reasons that they have always been deprived of other material goods."

For every vaccine, there's been a campaign against it

"Anti-vaccination movements are as old as vaccines themselves," Bhattacharya says.

What drives people to oppose a vaccine? You have to look at what is happening in a country or community culturally and politically and that is where you'll find your answers. It is usually a combination of factors that create doubts about how safe and effective a vaccine is, Bhattacharya says.

Left: A drawing of a human with a cow head holding a needle menacingly toward a child as he administers a tainted smallpox vaccination was meant to sow distrust of smallpox vaccines. Right: Protesters against COVID-19 vaccinations hold a rally in Sydney in February. (Photo/Bettman/Getty Images; Brook Mitchell/Getty Images)

But what really gets people riled up, Colgrove says, is when governments mandate vaccinations. "What gets people marching in the stress, forming orgs, creating pamphlets is when governments start to require it. If you don't want the vaccine, but you don't feel like anyone is forcing you to get it, then you just don't get it. Anti-vaccination movements really arose in the mid-19th century when governments started to require it."

There have always been trust issues

A vaccine campaign must address the issues of trust between those giving the vaccines and those receiving it, Bhattacharya says. You can't run it just with logistics. The vaccine campaigns that don't take trust into account end up struggling while the process drags on to get a disease under control.

In the case of polio, Bhattacharya says, it was difficult to convince communities to get the vaccine in places where governments hadn't acted in the communities' interest on other issues.

Boys stand in line to be vaccinated through the smallpox eradication and measles control program in West Africa in 1968. While smallpox has been eradicated, measles remains a leading cause of death among young children, even though a safe and cost-effective vaccine is available, the World Health Organization says. (Smith Collection/Gado/Getty Images)

"It was about [the government] convincing people that the polio vaccination was about their best interests in a context where governments had done little for their general welfare. This was the context in which polio vaccination drives were resisted in northern India, for example," Bhattacharya says. People have said it was superstition about the vaccine that prevented Indians from getting the vaccine, but it was actually about "a fundamental lack of trust."

COMMUNITY

(Continued From Page C7-1)

A Brief History Of Vaccine Delivery Through The Years

It's all about the advertising

To get the word out and make a convincing argument about the vaccine, it's all about marketing and messaging. Advertising techniques were first used in the 1920s for diphtheria immunizations, Colgrove says. (Think images of smiling babies with warnings in red ink that diphtheria kills.)

A 1963 poster featuring the CDC's national symbol of public health, "Wellbee," encourages the public to take an oral polio vaccine. (Photo/CDC/PHIL/Corbis via Getty Images)

The way a vaccine is given is also critical. The first oral vaccine in the 1960s for polio replaced the hypodermic needle. It certainly made it much easier to sell to those who might be hesitant or fearful of needles, Colgrove says.

"Needle phobia is a big deal, and orally administered vaccines are more acceptable to many people. Also you don't have to worry about the injection equipment [which was helpful for mass vaccinations]," Colgrove says. "In fact one of the reasons the global polio eradication ended up being so successful was they used the oral vaccine as opposed to the injected vaccine." The oral vaccine also did a better job of protecting against the virus.

The West makes the vaccines and the rules. That's actually kind of new

The West wasn't always the main player in vaccine production — although it was always on the path to be. Following World War II, several newly independent (decolonized) countries were keen to develop their own vaccine production capabilities. Two examples are India and Pakistan, Bhattacharya says.

"Countries like India and Pakistan were able to play Cold War foes [the U.S. and Soviet Union] against each other to get access to new vaccine production technologies, assistance in setting up new vaccine production units," he adds.

So how did the West ultimately get control? In that post-World War II era in the West, people started to realize there was money to be made in all pharmaceuticals (not just vaccines), and "the business landscape changed," Colgrove says.

Marie Josette Francou (right), a Red Cross nurse, vaccinates a child against cholera in 1953 in Indochina (now Vietnam). (Intercontinentale/AFP via Getty Images)

What had been a cottage industry of small pharmaceutical companies, individual investigators and physician scientists started producing more products along with vaccines, Colgrove says. They evolved into the mega companies that exist today.

That said, other countries are still in the vaccination business — albeit with mixed results — including Russia's Sputnik V, China's Sinovac and outlier Cuba.

Workers wait to open a secure door in the packaging area of Sinopharm's COVID-19 vaccine during a media tour organized by the State Council Information Office in February in Beijing. Sinopharm is one of China's largest state-owned biotech companies. Kevin Frayer/Getty Images

The power and politics behind vaccines

Politicians love their mottos and the vaccination effort is no different. In the U.S., government officials called it Operation Warp Speed and now the "We Can Do This" campaign. In Germany, it's "Vaccinate, Vaccinate, Vaccinate." In Israel, it's "Getting Back to Life."

So, how much of vaccine production and distribution is about political power and money?

Bhattacharya says pretty much all of it. "Pandemic responses, including the vaccination programs that underpin them, are always political," he says. "Those who claim that they know the means of accentuating 'global solidarity' are no less political; they just have different political goals."

Left: Thousands of New Yorkers, on an appeal by government officials, came to city hospitals and health stations to get vaccinated against smallpox. Here a crowd lines up outside a Bronx hospital in April 1947. Right: In an aerial view from a drone, cars line up for a mass COVID-19 vaccination event in January in Denver. (Photo/Bettmann/Getty Images; Michael Ciaglo/Getty Image)

And the money? Most vaccines wouldn't exist if Big Pharma didn't make a profit off them, Colgrove says.

One of the criticisms is that we have vaccines for diseases that burden rich countries but not for those that plague poor countries — such as malaria and dengue fever. "If those diseases were a problem in Europe and the U.S., we would probably have vaccines for them now."

That's the contradiction of the pharma industry, Colgrove says. "On the one hand they produce these drugs for the benefit of everyone, but their mission is to make profits for their shareholders."

What will the world say about the COVID-19 vaccination effort in 100 years?

People will not remember the details, Colgrove says. Take, for example, the polio vaccine rollout, he says. If you ask people today, they would say it was a huge success, but they forget it was total chaos for a while. "There were a lot of problems with the initial distribution during the period when the demand exceeded the supply. The polio vaccine was developed by a nonprofit foundation. The U.S. government had very little involvement because the Eisenhower administration saw involvement as the opening for socialized medicine.

"There was also lots of confusion and uncertainty about who should get the vaccine first and supplies were limited. There were stories of rich people pulling strings to get their kids vaccinated first."

Sanitation worker Ramesh Solanki cleans the streets outside India's Palghar railway station. "I get up every morning at 5:30, and I see news about the vaccines on TV," he says. "I don't know about any controversies. I just know I'm proud to be part of this." As a sanitation worker, he was among the first Indians eligible to get the coronavirus vaccine. (Photo/Viraj Nayar for NPR)

When it came to the COVID-19 vaccine, the Centers for Disease Control and Prevention knew there were limited supplies so it was able to prioritize certain populations such as health care workers and older people, Colgrove says. "But I think the way people will remember the COVID rollout will depend on what happens in the coming months and years."

No one can deny the incredible feat of making vaccines in a year. But Bhattacharya points to another legacy.

Bhattacharya says it's unfortunate, but this vaccination effort will be all about profits, not humanity — the world was let down when it comes to equity and access to the vaccine.

Two men, wearing personal protective equipment, visit the grave of a relative in a public cemetery, reserved for suspected COVID-19 victims, in December in Jakarta, Indonesia. Ulet Ifansasti/Getty Images

"I think our descendants will look back with some shame at the efforts of so many private vaccine producers to make immense profit from human misery and anxiety." (Courtesy npr.org) NPR Writers include: Michele Abercrombie, Xueying Chang, Ben De La Cruz and Suzette Lohmeyer.

Facebook 'operating in the shadows' says whistleblower as U.S.

WASHINGTON, Oct 5 (Reuters) - U.S. lawmakers pounded Facebook (FB.O) on Tuesday, accusing CEO Mark Zuckerberg of pushing for higher profits while being cavalier about user safety and they demanded regulators investigate whistleblower accusations that the social media company harms children and stokes divisions.

During a Senate Commerce subcommittee hearing, whistleblower Frances Haugen called for transparency about how Facebook entices users to extend their stay on the site, giving them ample opportunity to advertise to them.

"As long as Facebook is operating in the shadows, hiding its research from public scrutiny, it is unaccountable," said Haugen, a former employee of the nearly $1 trillion company who turned whistleblower.

"The company's leadership knows how to make Facebook and Instagram safer, but won't make the necessary changes because they have put their astronomical profits before people. Congressional action is needed," Haugen said.

In an era when bipartisanship is rare in Washington, lawmakers from both parties excoriated the company, illustrating the rising anger in Congress with Facebook amid numerous demands for legislative reforms.

Senator Dan Sullivan, a Republican, said he was concerned about how Facebook and subsidiaries like Instagram affected the mental health of children. "I think we're going to look back 20 years from now and all of us are going to be like 'what the hell were we thinking?'"

Haugen revealed she was the one who provided documents used in a Wall Street Journal investigation and a Senate hearing on Instagram's harm to teenage girls. She compared the social media sites to addictive substances like tobacco and opioids.

Panel chair Senator Richard Blumenthal, a Democrat, said Facebook knew that its products were addictive. "Tech now faces that big tobacco jaw-dropping moment of truth," he said.

Report ad
He called for Zuckerberg to testify before the committee, and for the Securities and Exchange Commission and Federal Trade Commission to investigate the company.

"Our children are the ones who are victims. Teens today looking in the mirror feel doubt and insecurity. Mark Zuckerberg ought to be looking at himself in the mirror," Blumenthal said.

Blumenthal said after the hearing that he would want to ask Zuckerberg why he rejected recommendations to make the company's products safer for users.

A Pictorial Essay

A Brief History Of Vaccine Delivery Through The Years

In January 1929, Dr. L.E. Bensom of Los Angeles used his vacation to mush to native villages in Alaska. At the close of a particularly hard day on the trail, he found himself with 70 patients on his hands, all suffering from smallpox. There were 100 people in the village with no medical facilities. Bettmann/Getty Images

Compiled And Edited By John T. Robbins, Southern Daily Editor

Vaccines delivered by drones and by burros. People who shout about the danger of vaccines and refuse to get a jab. Public health campaigns to convince the vaccine hesitant. Public criticism of a failure to provide vaccines for lower-income countries and marginalized populations.

These are all part of the unprecedented world vaccination campaign now going on.

They're also the hot-button topics that go back to the very first vaccine — for smallpox in 1796.

Dr. Sergen Saracoglu (left) and nurse Yilzdiz Ayten (center) arrive at the village of Guneyyamac in Turkey on Feb. 15 as part of an expedition to vaccinate residents 65 years and over with Sinovac's CoronaVac COVID-19 vaccine. (Photo/Bulent Kilic/AFP via Getty Images)

In photographs and illustrations from past and present vaccine campaigns, you can see both the similarities and the striking contrasts.

James Colgrove, a professor of sociomedical sciences at Columbia University, and Sanjoy Bhattacharya, a professor of history at the University of York and director of the WHO Collaborating Centre for Global Health Histories, helped us out with historical context to go along with the images.

The vaccine has been created. Now how to get it where it needs to go?

Getting a vaccine from point A to point B has been a logistical problem since the very start with the smallpox vaccines, Bhattacharya says.

Back then, it was a painstaking process. Liquid was usually taken from an open smallpox sore, dried and mixed with water when ready to vaccinate. But transportation delays would sometimes render the vaccine ineffective. (The method had a shelf life of weeks to months — not a long time considering the transport options at the time.)

In 1900, a young cow is tied onto a table waiting for the extraction of pox sore to be used for vaccines for smallpox. (Photo/Berliner Illustrations Gesellschaft/ullstein bild via Getty Images)

The solution? Medical teams would take children (in one case, orphans were used to transport the virus from Spain to its colonies) and animals (such as cows and horses) from village to village or from country to country, harvesting liquid from smallpox or cowpox sores and getting it under the skin of an unvaccinated person. But that was clearly not a sustainable practice, Bhattacharya says, for ethical and scientific reasons.

Many years of innovation followed, including the development of freeze-dried vaccines. The COVID-19 vaccine world is dependent on cold chain technology that uses super freezers to keep vaccines at temperatures as low as minus 13 degrees Fahrenheit while they make their way on planes, trains and automobiles.

Ousseynou Badiane, the head of Senegal's vaccination program, stands in front of newly built cold rooms at Fann Hospital in Dakar, Senegal, in January. These cold rooms may be used to help store the country's stock of COVID-19 vaccines. (John Wessels/AFP via Getty Images)

Relying on cold storage technology is still not a perfect system.

The challenge has always been the greatest in poor and rural areas. "You have to make sure you have generators to maintain refrigerators," Colgrove says. It is the same problem countries are having with the COVID-19 vaccine today.

Left: A West German Navy vessel hands over vaccines to the U.S. transport General Patch in July 1957 for people sick with the Asiatic flu. Right: Health workers use a speedboat to make their way to vaccinate Quilombo communities against COVID-19 in Oriximiná, Brazil, in February. (Photo/Henry Brueggemann/AP; Tarso Sarraf/AFP via Getty Images)

Vaccine inequity is "just one part of a larger picture of inequity," Colgrove says. "People have been unvaccinated for the same set of reasons that they have always been deprived of other material goods."

For every vaccine, there's been a campaign against it

"Anti-vaccination movements are as old as vaccines themselves," Bhattacharya says.

What drives people to oppose a vaccine? You have to look at what is happening in a country or community culturally and politically and that is where you'll find your answers. It is usually a combination of factors that create doubts about how safe and effective a vaccine is, Bhattacharya says.

Left: A drawing of a human with a cow head holding a needle menacingly toward a child as he administers a tainted smallpox vaccination was meant to sow distrust of smallpox vaccines. Right: Protesters against COVID-19 vaccinations hold a rally in Sydney in February. (Photo/Bettman/Getty Images; Brook Mitchell/Getty Images)

But what really gets people riled up, Colgrove says, is when governments mandate vaccinations. "What gets people marching in the stress, forming orgs, creating pamphlets is when governments start to require it. If you don't want the vaccine, but you don't feel like anyone is forcing you to get it, then you just don't get it. Anti-vaccination movements really arose in the mid-19th century when governments started to require it."

There have always been trust issues

A vaccine campaign must address the issues of trust between those giving the vaccines and those receiving it, Bhattacharya says. You can't run it just with logistics. The vaccine campaigns that don't take trust into account end up struggling while the process drags on to get a disease under control.

In the case of polio, Bhattacharya says, it was difficult to convince communities to get the vaccine in places where governments hadn't acted in the communities' interest on other issues.

Boys stand in line to be vaccinated through the smallpox eradication and measles control program in West Africa in 1968. While smallpox has been eradicated, measles remains a leading cause of death among young children, even though a safe and cost-effective vaccine is available, the World Health Organization says. (Smith Collection/Gado/Getty Images)

"It was about [the government] convincing people that the polio vaccination was about their best interests in a context where governments had done little for their general welfare. This was the context in which polio vaccination drives were resisted in northern India, for example," Bhattacharya says. People have said it was superstition about the vaccine that prevented Indians from getting the vaccine, but it was actually about "a fundamental lack of trust."

A Brief History Of Vaccine Delivery Through The Years

It's all about the advertising

To get the word out and make a convincing argument about the vaccine, it's all about marketing and messaging. Advertising techniques were first used in the 1920s for diphtheria immunizations, Colgrove says. (Think images of smiling babies with warnings in red ink that diphtheria kills.)

The way a vaccine is given is also critical. The first oral vaccine in the 1960s for polio replaced the hypodermic needle. It certainly made it much easier to sell to those who might be hesitant or fearful of needles, Colgrove says.

"Needle phobia is a big deal, and orally administered vaccines are more acceptable to many people. Also you don't have to worry about the injection equipment [which was helpful for mass vaccinations]," Colgrove says. "In fact one of the reasons the global polio eradication ended up being so successful was they used the oral vaccine as opposed to the injected vaccine." The oral vaccine also did a better job of protecting against the virus.

The West makes the vaccines and the rules. That's actually kind of new

The West wasn't always the main player in vaccine production — although it was always on the path to be. Following World War II, several newly independent (decolonized) countries were keen to develop their own vaccine production capabilities. Two examples are India and Pakistan, Bhattacharya says.

"Countries like India and Pakistan were able to play Cold War foes [the U.S. and Soviet Union] against each other to get access to new vaccine production technologies, assistance in setting up new vaccine production units," he adds.

So how did the West ultimately get control? In that post-World War II era in the West, people started to realize there was money to be made in all pharmaceuticals (not just vaccines), and "the business landscape changed," Colgrove says.

What had been a cottage industry of small pharmaceutical companies, individual investigators and physician scientists started producing more products along with vaccines, Colgrove says. They evolved into the mega companies that exist today.

That said, other countries are still in the vaccination business — albeit with mixed results — including Russia's Sputnik V, China's Sinovac and outlier Cuba.

The power and politics behind vaccines

Politicians love their mottos and the vaccination effort is no different. In the U.S., government officials called it Operation Warp Speed and now the "We Can Do This" campaign. In Germany, it's "Vaccinate, Vaccinate, Vaccinate." In Israel, it's "Getting Back to Life."

So, how much of vaccine production and distribution is about political power and money?

Bhattacharya says pretty much all of it. "Pandemic responses, including the vaccination programs that underpin them, are always political," he says. "Those who claim that they know the means of accentuating 'global solidarity' are no less political; they just have different political goals."

Left: Thousands of New Yorkers, on an appeal by government officials, came to city hospitals and health stations to get vaccinated against smallpox. Here a crowd lines up outside a Bronx hospital in April 1947. Right: In an aerial view from a drone, cars line up for a mass COVID-19 vaccination event in January in Denver. And the money? Most vaccines wouldn't exist if Big Pharma didn't make a profit off them, Colgrove says.

One of the criticisms is that we have vaccines for diseases that burden rich countries but not for those that plague poor countries — such as malaria and dengue fever. "If those diseases were a problem in Europe and the U.S., we would probably have vaccines for them now."

That's the contradiction of the pharma industry, Colgrove says. "On the one hand they produce these drugs for the benefit of everyone, but their mission is to make profits for their shareholders."

What will the world say about the COVID-19 vaccination effort in 100 years?

People will not remember the details, Colgrove says. Take, for example, the polio vaccine rollout, he says. If you ask people today, they would say it was a huge success, but they forget it was total chaos for a while. "There were a lot of problems with the initial distribution during the period when the demand exceeded the supply. The polio vaccine was developed by a nonprofit foundation. The U.S. government had very little involvement because the Eisenhower administration saw involvement as the opening for socialized medicine.

"There was also lots of confusion and uncertainty about who should get the vaccine first and supplies were limited. There were stories of rich people pulling strings to get their kids vaccinated first."

Sanitation worker Ramesh Solanki cleans the streets outside India's Palghar railway station. "I get up every morning at 5:30, and I see news about the vaccines on TV," he says. "I don't know about any controversies. I just know I'm proud to be part of this." As a sanitation worker, he was among the first Indians eligible to get the coronavirus vaccine. (Photo/Viraj Nayar for NPR)

When it came to the COVID-19 vaccine, the Centers for Disease Control and Prevention knew there were limited supplies so it was able to prioritize certain populations such as health care workers and older people, Colgrove says. "But I think the way people will remember the COVID rollout will depend on what happens in the coming months and years."

No one can deny the incredible feat of making vaccines in a year. But Bhattacharya points to another legacy.

Bhattacharya says it's unfortunate, but this vaccination effort will be all about profits, not humanity — the world was let down when it comes to equity and access to the vaccine.
