## Trump touts economy, Georgia sees racist calls as U.S. vote nears

BELGRADE, Mont./ATLANTA (Reuters) - President Donald Trump touted U.S. economic growth and painted a grim picture on immigration in rallies with Republican candidates before Tuesday’s elections as Democratic former Vice President Joe Biden urged voters to reject division.

In the latest injection of racial tensions into the campaigns, a wave of automated calls using racist and anti-Semitic language went out to voters in Georgia, where a Democratic candidate is vying to become the first black female governor in the United States.

Control of both houses of the U.S. Congress, currently dominated by Republicans, and 36 governors’ offices will be at stake when Americans vote on Tuesday. Interest has been unusually high for a non-presidential election year, with early voting running well ahead of past cycles.

Opinion polls and nonpartisan forecasters generally show Democrats with a strong chance of taking the 23 additional seats they would need for a majority in the House of Representatives, which they could use to launch investigations into Trump’s administration and block his legislative agenda.

Republicans are favored to retain control of the Senate, whose powers include confirming Trump’s nominations to lifetime seats on the Supreme Court.

“America is booming. Republicans passed a massive tax cut for working families and we will soon follow it up with another 10 percent tax cut for the middle class,” Trump said, standing in a Belgrade, Montana, airfield with Air Force One as a backdrop.

U.S. President Donald Trump arrives to attend a campaign rally for Republican U.S. Senate candidate Matt Rosendale at the Bozeman Yellowstone International Airport in Belgrade, Montana, U.S., November 3, 2018. REUTERS/Carlos Barria

Last December, Trump signed into law the largest tax overhaul since the 1980s, which slashed the corporate rate to 21 percent from 35 percent and temporarily reduced the tax burden for most individuals as well.

The appearance was intended to boost the campaign of Matt Rosendale, the Republican state auditor challenging Democratic U.S. Senator Jon Tester. Trump called out Tester for his vote against his most recent Supreme Court nominee, saying “what he did was terrible.”

Republicans in many competitive suburban districts have tried to focus their campaign messages on the robust economic growth, though in his campaign appearances Trump has also focused on his hard-line immigration stance as he looks to stem the illegal

U.S. President Donald Trump arrives to speak about the shooting in Pittsburgh, under the wing of Air Force One at Joint Base Andrews in Maryland, U.S., before traveling to Indiana and Illinois, October 27, 2018. REUTERS/AI Drago

and legal flow of people into the United States.

“The Democrats want to invite caravan after caravan to flood your communities, depleting our resources and flooding our nation,” Trump told the Montana crowd. “We don’t want that.”

Biden campaigned in Ohio on Saturday in support of Democrats U.S. Senator Sherrod Brown and gubernatorial candidate Richard Cordray.

“We’re in a battle for America’s soul,” Biden, his voice faint and scratchy, told a crowd at a high school south of Cleveland. “We

## Gunman at Florida yoga studio had been accused of harassment

(Reuters) - A gunman who killed two women at a Florida yoga studio and wounded five other people before taking his own life had previously been accused of harassing young women, police said on Saturday.

Authorities said they do not know why Scott Beierle, 40, opened fire on Friday afternoon after posing as a customer to join the class at the Hot Yoga studio in Tallahassee. Detectives are searching for links between him and the victims.

The bloodshed prompted the city’s mayor, Andrew Gillum, who is also Florida’s Democratic candidate for governor, to halt his campaign temporarily and return to Tallahassee.

The two women who died were identified as a student and a fac-

ulty member from Florida State University.

Police said Beierle was a graduate of FSU who served in the military, and that he had been the subject of calls to authorities in the Tallahassee area “related to harassment of young women.”

In a statement, police said Beierle was staying in a local hotel at the time of the attack, and that investigators were also searching his home in Deltona, Florida, more than 200 miles (322 km) southeast of Tallahassee.

Police did not give more details on incidents involving Beierle and young women.

Citing court records, the Tallahassee Democrat newspaper reported that he was arrested in 2012 and 2016 on charges of grabbing women’s buttocks, but both cases

were dismissed.

An attorney who previously represented Beierle could not be reached for comment.

Two women who were wounded in the shooting remained hospitalized in stable condition on Saturday, police said. Two other shooting victims and a man who was pistol-whipped by Beierle were treated and released.

“There were indications that several people not only fought back but tried to save other people,” Tallahassee Police Chief Michael DeLeo said at a news conference.

One of the women killed was identified as Nancy Van Vessel, 61, a doctor specializing in internal medicine who was a member of the faculty at Florida State University College of Medicine in Tallahassee.

The other was named as Maura Binkley, a 21-year-old student at FSU.

Their deaths were “just devastating to the FSU family,” said the university’s president, John Thrasher.

Van Vessel also worked as chief medical director for Capital Health Plan, which described her in a statement as a “guiding, visionary force” and “one of the most respected, inspiring, and accomplished medical professionals in the state and country.”

Emergency vehicles are parked outside the Hot Yoga studio at a shopping center where a gunman opened fire in Tallahassee, Florida, U.S., November 2, 2018, in this still image taken from a video obtained from social media. Erin Vansickle/via REUTERS

FSU said her research was fo-

cused on restructuring healthcare for people with multiple chronic diseases.

According to the Miami Herald newspaper, Binkley had attended Dunwoody High School in suburban Atlanta, Georgia, and was a senior at FSU with an English and German double major. She participated in an FSU exchange program over the summer and spent four months studying at the University of Wuppertal, near Dusseldorf in Germany.

“It can be really scary at first knowing that you are going to spend a semester far away from home,” Binkley told Florida State University News upon her return. “But in the end, the experience is so rewarding and makes the world seem so small.”

## The City of Houston's highest paid public officials in 2018

Houston's top paid public employee is also the city's top cop, a new look at City of Houston employee salaries reveals.

In 2018, Houston Police Chief Art Acevedo was joined by four other public officials whose bi-weekly earning were at least above \$10,000, or an estimated annual salary of \$260,000. The same city data shows that the average salaried City of Houston employee earns a bi-weekly paycheck of \$2,696, or about \$70,096 a year.

As shown in the gallery above, the wages of some of Houston's top officials are nothing to scoff at, but they come nowhere to those on state salaries, particularly those in academia. A Texas Tribune tool showing the most well-paid state employees shows the top three earners are football coaches for the University of Texas at Austin and Texas A&M.

1. Art Acevedo - Houston Police Chief  
Bi-weekly pay: \$10,769  
Estimated annual salary: \$279,990

2. Carol Haddock - Director of Department of Public Works and Engineering (tie)  
Bi-weekly pay: \$10,580  
Estimated annual salary: \$275,000

2. Mario Diaz - Director of Aviation Houston Airport System (tie)  
Bi-weekly pay: \$10,580  
Estimated annual salary: \$275,000

3. David Persse - City of Houston EMS Physician Director/Public Health Authority  
Bi-weekly pay: \$10,013  
Estimated annual salary: \$260,340

5. Chris Souders - Associate Medical Director at Houston Fire Department  
Bi-weekly pay: \$8,343  
Estimated annual salary: \$216,918

6. Eric Dargan - Deputy Director of Department of Public Works and Engineering  
Bi-weekly pay: \$8,319  
Estimated annual salary: \$216,290

4. Sylvester Turner - Mayor of Houston  
Bi-weekly pay: \$9,084  
Estimated annual salary: \$236,180

## Southwest to provide free movies on its flights

Southwest Airlines, the largest carrier at Hobby Airport, is now offering free movies aboard its aircraft. The airline announced Thursday that it will provide up to 30 movies on its WiFi-enabled jets. These movies, previously requiring a payment, can be viewed through the Southwest mobile app downloaded onto travelers' personal devices. The free movies should be available to most customers by the end of this week. At HoustonChronicle.com: Southwest Airlines, citing passenger allergy concerns, bumps the peanut. Last month, Southwest began offering free messaging through iMessage or WhatsApp. And in May, it began providing access to the iHeartRadio library of music and podcasts.

"Our research shows that a positive experience on board the aircraft can greatly influence the decision to come back to Southwest," Ryan Green, vice president and chief marketing officer, said in the news release. "We listened to our customers." Democrats that Sayoc targeted. Sayoc sent explosive devices containing "shards of glass that could only have been intended to maximize harm to the defendant's victims," according to federal prosecutors.

Sayoc is accused of targeting Obama, former presidential candidate Hillary Clinton, and former vice president Joe Biden, among others. Prosecutors have said Sayoc, a vocal Trump supporter, kept a list of more than 100 potential targets. It is unclear whether O'Rourke was on that list.

An aerial view of Babcock Ranch near Fort Myers, Florida, which is projected to have 50,000 residents by the time it's completed.

**Overview**  
People are starting to move into Babcock Ranch, an ambitious development in Florida more than a decade in the making. With a solar field and self-driving shuttles, it's a suburb that its creators hope will be revolutionary.

BABCOCK RANCH, FLORIDA—Like a lot of Floridians, Syd Kitson loves the sun. But his passion is mainly for the energy it feeds to his new development, Babcock Ranch, which bills itself as the country's first solar-powered city, located 15 miles northeast of Fort Myers and close to Florida's southwest coast.

This particular day in March turned out to be a milestone for Kitson, an NFL guard-turned-property developer who has been chasing his vision of a sustainable society for more than a decade. As he surveyed the 440 acres of solar panels already in place, on land that he donated to Florida Power & Light, he said he just learned that the utility company plans to double the size of its energy farm. "FPL is going to add another 75 megawatts, so we're going to have a total of 150 megawatts," Kitson said.

Syd Kitson at Babcock Ranch, which he calls a "living laboratory" (Richard Luscombe)

His ultimate plan is for a solar-powered city of 19,500 homes with a downtown, schools, restaurants, shopping and leisure facilities, and more than 50 miles of nature trails for walkers, runners, and cyclists. By full build-out, he hopes Babcock Ranch will have about 50,000 residents. The FPL solar farm is a cornerstone of the Babcock Ranch masterplan, and the 14 months between the farm's October 2015 groundbreaking and its 343,000 panels coming online last December reflect the quick pace of the development as a whole. It was only in January that the first residents began moving in. This month, a health, wellness, and lifestyle center opened in Founder's Square, the development's town center, with medical offices, a gym, and a swimming pool. That followed the rollout of a K-8 charter school with a STEAM-based curriculum; a lakeside gastropub serving locally-grown seed-to-table organic food; and a cavernous co-working space called The Hatchery, with options from walk-up desk rentals to serviced offices.

On weekends, electric self-driven shuttles ferry residents and visitors around as part of testing by the autonomous transportation company Transdev. There are plans to expand the pilot to an Uber-style on-demand service.

At a cursory glance, Babcock appears little different from numerous other planned communities around Florida. It has single-family detached houses arranged into neighborhoods, and the seven homebuilders that partnered with Kitson offer a range of models from two to five bedrooms, priced

from the \$190,000s to more than half a million dollars. The sales pitch rests on their high-tech and green features. These are Alexa-controlled smart homes with 1-gigabit fiber internet and wiring for electric cars in every garage; kitchens and laundry rooms piped for natural gas cooktops, ranges, and dryers; and metal roofs to reduce heating and cooling costs.

Founder's Square, the development's town center, already has a health and wellness center, a co-working space, and a gastropub. (Babcock Ranch)

These are Alexa-controlled smart homes with 1-gigabit fiber internet and wiring for electric cars in every garage. Additionally, homeowners are encouraged to grow vegetables in community gardens, landscaping is limited to native plants (with turf covering no more than 30 percent of yard space), and all irrigation water is reclaimed.

Kitson describes Babcock Ranch as "a living laboratory," with energy self-sufficiency at its core. All public and commercial buildings with good exposure have roofs covered with solar panels, and solar "trees" are dotted around the public areas to bolster the power supply and provide recharge stations for visitors' cell phones, tablets, and laptops. What you won't see are solar panels on the roofs of most houses. Residents are hooked up to FPL's grid in the same way, and billed at the same rates, as any other of the utility's customers. "For us to truly be sustainable and a solar-powered town, we absolutely have got to do it on a utility-scale basis, period," Kitson said. "Solar power comes to us first, and the excess goes into the grid. I can't see how that's not a huge win for everybody."

Some outside analysts believe that Kitson's pursuit of that utility-scale solar is the key to the long-term viability of the project. "In the future, we're going to see almost all of our new developments powered by renewable energy, and to the extent this is a model for the future, especially in Florida, it's a good thing," said Ed McMahon, senior fellow for sustainable development and environmental policy at the Urban Land Institute.

One of the self-driving shuttles that Transdev is piloting in the town (Richard Luscombe)

Even before the upcoming solar-field expansion, Babcock Ranch is generating more electricity than it needs, Kitson said, and in a further innovation now has the capacity to store some of it. Ten single-megawatt batteries that became operational earlier this year on the western edge of the solar field—and also slated for future expansion—can store power for four hours, allowing a stable discharge during cloudy spells, or to "reserve" energy from sunny afternoons for peak evening demand.

The town's buildings, constructed to match or exceed the latest county codes, soaked up everything the furious 2017 hurricane season had to offer. "During Irma, the eye of the storm came right over us," Kitson said. "We did just fine, and we're 30 feet above sea level so we didn't flood. Sure, there

were a few trees down, but we just picked them right back up because we'd just planted them."

Kitson said the initial planning and design of the town was a community effort. In the mid-2000s, his team held meetings in community halls, city offices, and even at late-night social gatherings around Charlotte County to discuss what kind of town local people would want to live in, or at least visit. "It was [that] input that established the principles that continue to guide every planning decision," he said. Several architecture and planning firms collaborated to shape the new town, including Looney Ricks Kiss, Harvard Jolly, and Kimley-Horn.

The master plan was approved in 2006, but the project was put on hold through the economic downturn of the late 2000s, which Kitson admitted was "less of a curveball, more of a boulder." Babcock Ranch is still in its infancy. Only about 20 families have taken up residence so far, a number that's expected to grow to about 100 by the end of this year as more new homes become ready for occupancy. The Babcock Ranch Neighborhood School already has 156 students (who live outside the town). Shannon Treece, the principal, says the development growing up around the school provides hands-on, real-life lessons in environmental stewardship.

Babcock Ranch is an approximately 17,000-acre planned community under development in Southwest Florida. It is to be the first solar-powered city in the United States.

States offering residents the opportunity to purchase a piece of American history.

"We are in a place that ... just evokes that spirit of innovation and that engagement of people," Treece said. "It's easy to open a textbook and read and answer questions. But project-based learning has a really specific driving question, and it always has a community-partner piece as well, which is, 'How is it going to change the community we're in?' That's the connection to here."

With guidance from the chef of the Tap and Table, Babcock's gastropub, students aced a recent solar cook-off tournament against other local schools. They harvested ingredients from their own community garden and created a three-course teriyaki meal. The students also track how much energy the school consumes by reading data from a solar tree in their playground.

When a larger school building opens in August, there will be twice as many children, teachers, and staff. Ultimately, there are plans for eight schools from pre-K to high school, with enrollment open to any child who qualifies to attend public school in Charlotte County.

Two likely future students are the three-year-old son and newborn daughter of Matt Angerer. Angerer rents an office in The Hatchery for his online business, and can't wait to move his young family to Babcock when their home is ready in September.

"What better situation than having a home here and office space to grow my company and my

family?" he said. "I'm an early adopter. I believe in technological innovation, but I also think we should leverage technology to help the environment and sustainability."

Angerer said that everything at Babcock Ranch "fit the bill for us, including the school. They're focusing on the family core, a comfortable and safe place to bring your children. (That is, apart from the alligators, which are "everywhere," he said.)

Babcock Ranch may be giving us a peek of tomorrow's suburbia. Local criticism of the development so far has focused on the environmental impacts of its footprint.

When Kitson bought the 91,000-acre working ranch in 2006 for more than \$500 million, it had seen cattle ranching, alligator farming, the raising of crops including watermelons, and even rock mining and eco-tourism, but faced an uncertain future in the wake of the death of sole landowner and family patriarch Fred Babcock in 1997.\* Yet because of the ongoing stewardship of the land, it was in good condition. After the purchase, Kitson immediately sold 73,000 acres, or about 80 percent of it, to the state of Florida for preservation, with the remaining 18,000 acres, spanning Charlotte and Lee counties, set for development over the next 20 years.

At a meeting of the Lee County commission in February, Kitson won approval for a land-use change from agricultural to planned development, and got a green light for construction of Babcock's southern section (everything else so far has been in Charlotte County). Some environmentalists spoke out. Carl Veaux, vice president of the Cape Coral Wildlife Trust, accused commissioners of "ripping the word 'rural' right out of the heart of Lee County," according to the News-Press. "This is the most beautiful parcel of land on Babcock Ranch, and they're going to develop it."

Kitson wants his critics to see the town firsthand before passing judgment. "They think they'll come in and [it'll be] like George Jetson, but it's not. It's an old-town feeling with all of those modern conveniences and technology of today." He acknowledges that some will question the choices that were made for Babcock Ranch on environmental grounds, and whether it can call itself fully sustainable when, for example, residents still need cars to commute to jobs in other towns, and the housing stock is larger detached homes rather than higher-density units.

The houses at Babcock Ranch range from about 1,500 to 4,000 square feet. Built by a range of homebuilders, they are required to meet at least a bronze standard of certification from the Florida Green Building Coalition. (Babcock Ranch)

His answer is that he has made a laboratory out of a place where traditional models of community

and family life are central. New ideas can be developed and tested at Babcock Ranch, and expanded gradually toward sustainability, without wholesale changes that would be too radical for many people. "Americans are not going to go from one car for every driver to no cars for every household overnight."

"Americans are not going to go from one car for every driver to no cars for every household overnight," Kitson said. "We start by making the cars just one option for getting around. When people can walk, bike, catch a shuttle, use a handheld device to summon an autonomous vehicle, or utilize a shared vehicle service for trips off-site, they will quickly realize they don't really need their own car."

"What we are creating," he continued, "is a suburban-urban environment with everything in walking distance, and [we're] working continuously to bring more jobs within our town footprint to achieve the goal of a real, multi-generational town where people live, work, and play."

McMahon believes that solar power, for Babcock, is the market differentiator that large, out-of-town developments need these days to prompt people to move there, as well as an environmental good. "It's a greenfield site; everybody has to drive there from somewhere else, [and] there's energy used in building the site and getting to it and from it," he conceded. "So it's not completely carbon-neutral in that sense. But as we like to say at the Urban Land Institute, 'It's better to be half right than all wrong.'"

In the future, McMahon continued, "the most successful communities in Florida are going to be ones that are walkable, where you can reduce your transportation. There's no place that's probably perfect, but all these things are steps in the right direction."

Richard and Robin Kinley at their new home in Babcock Ranch. "It feels like you're gaining good karma, living here," Richard Kinley said. (Richard Luscombe)

For Richard Kinley and his wife Robin, Babcock's first residents, who moved into their house in January from Atlanta, the development is living up to its promise so far. "It feels like you're gaining good karma, living here," said Richard Kinley, a semi-retired medical professional.

"We go days without needing air conditioning, because homes are built to green standards and are well insulated. The metal roof helps decrease costs. I also have an electric car charging in the garage, so I'm using solar energy to drive around the state," he said. "We want to live here because it encourages a lifestyle we want to take on. It's nice to live in a community where like-minded people are moving."

All of which is music to Kitson's ears. "If I come back in 20 years," he said, "and see families, empty nesters, and retirees all mingling together; autonomous vehicles taking people from place to place; kids using technology outdoors; a respect for nature where the air is clean and the water is pure—that those things we talked about from Day One have come to fruition—then it will all have been worth it." SPECIAL  
REPORT

Homeless In US: A Deepening  
Crisis On The Streets Of America

Compiled And Edited By John T. Robbins, Southern Daily Editor

They seem to be almost everywhere, in places old and new, no age spared. Sleeping on cardboard or bare ground, the homeless come together under bridges and trees, their belongings in plastic bags symbolising lives on the move. Many have arrived on the streets just recently, victims of the same prosperity that has transformed cities across the US West Coast. As officials struggle to respond to this growing crisis, some say things are likely to get worse. Vibrant Portland, Oregon's largest city, has long lured many. It is the City of Roses, of pleasant climate, rich culture and progressive thinking. It is also an innovation hub, part of what is called Silicon Forest, and new residents have moved here in these post-recession years attracted by its high-tech companies and their well-paid jobs. But the bonanza, unsurprisingly, has not come to everyone. Booming demand in an area with limited housing offers quickly drove the cost of living up, and those who were financially on the limit lost the ability they once had to afford a place.

Many were rescued by family and friends, or government programmes and non-profit groups. Others, however, ended up homeless. The lucky ones have found space in public shelters. Not a few are now in tents and vehicles on the streets. "Even though the economy has never been stronger," Mayor Ted Wheeler, a Democrat, said, "inequality [is] growing at an alarming rate and the benefits from

a [growing] economy are increasingly concentrated in fewer and fewer hands... We have increasing disparity all across the United States, and that's definitely impacting people." His city is indeed not alone. Homelessness has increased in other thriving West Coast cities that are destinations for young, well-educated workers, like San Francisco and Seattle, where the blame has also largely fallen on rapidly rising costs and evictions. Exact numbers are always hard to come by but 553,742 people were homeless on a single night across the US in 2017, the Department of Housing and Urban Development said, the first rise in seven years. (The figure, however, was still 13% lower than in 2010.) Declines in 30 states were overshadowed by big surges elsewhere, with California, Oregon and Washington among the worst. Los Angeles, where the situation has been described as unprecedent-

ed, had more than 50,000 people without homes, behind only New York City, which had some 75,000. Prosperity across US regions Per capita income relative to national average 1929-2017

Joseph Gordon, known as Tequila, has lived in a homeless camp called Hazel-nut Grove since its creation in 2015, when Portland first declared a state of emergency over the crisis. "It's very scary. [The] people I have come across," said the 37-year-old, "are from every single walk of life. And the homeless population is getting bigger and bigger." Multnomah County reported 4,177 people homeless on a single night last year, a 10% rise from 2015 - many believed the number was even higher. Exposing

tensions, the president of Portland Police Association controversially said in July the city had become "a cesspool", a comment the mayor dismissed as "ridiculous". Tequila arrived from Cincinnati, Ohio, in 2011 and said they (Tequila is a transgender man and asks to be referred by this pronoun) became homeless after losing the apartment they shared with a former violent partner. "Being out on the street you deal with all sorts of things [like] having to relax with living with rats. You also start to appreciate running water or when you can go to the bathroom anytime you want," said Tequila. (People usually thought they were Mexican because of the colour of their skin, and the nickname was in reference to Jose Cuervo, the tequila brand.)

The self-governed community of small wooden structures next to a highway had more than a dozen residents, half of them with some sort of income, Tequila said. "If there was access to actual affordable housing they would take it." In Portland, the rent of a one-bed flat is, on average, \$1,136 (£867), which is out of reach for those who rely on Social Se-

curity checks, topped at \$735 locally, or earn the minimum wage, \$12 per hour. (Officials said half of the 1,300 units to be created would be reserved to those with extremely low income.) Elderly people and minorities have been disproportionately affected, according to a study by Portland State University, which said technology could result in thousands of low-paid jobs being cut, probably making things even worse. "We have a housing market that's really unaffordable for folks at the lowest income level," said Shannon Singleton, Executive Director of Join, a charity that helps homeless people return to permanent housing. "There's a real lack of hope. Folks are struggling to see the ability to end their homelessness and get back in the [market]." While some defend Tequila's camp as a model for an alternative solution, authorities have said it will, eventually, have to go. No date has been set yet but there have been troubles with nearby neighbours recently.

Homelessness, in Portland and beyond, seems to be more visible than ever. Residents are growing frustrated with the smell of urine, human feces and abandoned objects littering public spaces and, sometimes, their own doorsteps. In certain places, there is the feeling that this is a fight being lost. But this is a crisis long in the making. Cuts by the federal government to affordable housing programs and mental health facilities in the last few decades helped send many to the streets nationwide, officials and service providers said, as local authorities were unable to fill the gaps. The current affordability problem is now adding to it. (Courtesy bbc.com)
