Coronavirus spreads faster outside China, stoking global fears

People wearing face masks walk inside a subway station, as the country is hit by an outbreak of the novel coronavirus, in Shanghai, China February 17, 2020. REUTERS/Aly Song

SHANGHAI/SEOUL (Reuters) - The number of new coronavirus infections inside China - the source of the outbreak - was for the first time overtaken by fresh cases elsewhere on Wednesday, with Italy and Iran emerging as epicenters of the rapidly spreading illness.

Asia reported hundreds of new cases, Brazil confirmed Latin America's first infection and the new disease - COVID-19 - was also detected for the first time in Pakistan, Sweden, Norway, Greece, Romania and Algeria.

U.S. health authorities, managing 59 cases so far - mostly Americans repatriated from a cruise ship in Japan - have said a global pandemic is likely.

U.S. President Donald Trump, seeking to calm markets and an increasingly worried public, said in a live broadcast that the United States was "very very ready" to face the virus threat and that Vice President Mike Pence would be in charge of the national response. It was one of just a handful of times that the president has appeared in the White House briefing room.

Stock markets across the world have lost \$3.3 trillion of value in four days of trading, as measured by the MSCI all-country index .MIWD0000PUS. [MKTS/GLOB]

Wall Street reversed earlier gains on Wednesday afternoon

and oil prices dropped to their lowest level in over a year, spooked in part by health officials saying dozens of people who had been in China were being monitored in suburbs of populous New York city - although no confirmed cases have been found.

New York Mayor Bill de Blasio urged the federal government to tighten testing for visitors from a range of countries where the virus has been spreading, adding that its eventual detection in the city was "100% certain."

The virus that can lead to pneumonia is believed to have originated in a market selling wildlife in the central Chinese city of Wuhan late last year. It has infected about 80,000 people and killed more than 2,700, the vast majority in China.

While radical quarantining measures have helped slow the rate of transmission in China, it is accelerating elsewhere.

Germany, which has around 20 cases, said it was already impossible to trace all chains of infection, and Health Minister Jens Spahn urged regional authorities, hospitals and employers to review their pandemic planning.

A woman wearing a face mask is seen on a street in downtown Shanghai, China, as the country is hit by an outbreak of a new coronavirus, February 26, 2020. REUTERS/Aly Song
The World Health Organization (WHO) said China had reported 412 new cases on Tuesday, while there were 459 in 37 other countries.

However, WHO chief Tedros Adhanom Ghebreyesus advised

diplomats in Geneva on Wednesday against speaking of a pandemic - which the WHO defines as the worldwide spread of a new disease.

"Using the word pandemic carelessly has no tangible benefit, but it does have significant risk in terms of amplifying unnecessary and unjustified fear and stigma, and paralyzing systems," he said. "It may also signal that we can no longer contain the virus, which is not true."

As panic increased, Mexican authorities barred a cruise ship from docking at one of its ports over what the ship's company said was a single case of common seasonal flu.

The WHO says the outbreak in China peaked around Feb. 2, after measures that included isolating its epicenter Hubei province. It said only 10 new cases were reported in China on Tuesday outside Hubei.

There is no known vaccine for the virus. U.S. pharmaceutical firm Gilead Sciences Inc (GILD.O) said on Wednesday it had started two late-stage studies to test its experimental antiviral drug remdesivir in humans.

FIRST LATIN AMERICAN CASE

As the cases have rippled outwards, the effects on large gatherings have increased. In Japan, Prime Minister Shinzo Abe called for sports and cultural events to be scrapped or curtailed for two weeks as concern mounted for the 2020 Tokyo Olympics, while sources told Reuters the International Monetary Fund was considering whether to make its April meeting in Washington virtual.

U.S. consumer spending could see one-two punch from stocks drop, coronavirus

NEW YORK (Reuters) - The coronavirus outbreak has yet to spread meaningfully to U.S. shores, but fears of it alone have already eviscerated some \$2 trillion of American stock market value, setting off a market rout that could stymie consumer spending - even before other economic effects of the disease are felt. Economists now see the virus, its effect on markets and its potential to dampen consumer confidence as the biggest risk to a record-long economic boom.

"The tightening of financial conditions I think is really the key game changer in this outbreak," said Gregory Daco, chief U.S. economist for Oxford Economics.

The rise in global cases and warnings that the virus could spread in the United States caused stocks to fall, the dollar to strengthen and corporate spreads to widen, Daco said. That volatility also means some consumers with an eye to retirement may curtail their spending, he added. "You tend to be more cautious about your outlook because you're worried," Daco said.

While stock market rallies do not always lead to a pickup in consumer spending, Americans have scaled back consumption during previous bouts of market volatility.

In December 2018, for instance, when the S&P 500 Index .SPX fell 9.2% in its biggest monthly drop since the financial crisis, the Commerce Department's measure of core retail sales plunged 3% from the month before.

Through Tuesday, the S&P 500 had fallen 7.6% from its record high last Wednesday, wiping out more than \$2.1 trillion of value in just four days, a historic loss in paper wealth.

A prolonged market slump could deal a bigger blow to the U.S. economy than some of the other effects stemming from the shutdowns in China, such as disruptions to supply chains for American companies, because it could

directly affect the consumer, said Mark Zandi, chief economist at Moody's Analytics. "The American consumer really is the firewall between an expanding economy and a recession," Zandi said.

Baby boomers, who account for a large portion of consumer spending, are often quick to cut back on unnecessary expenses during periods of market volatility because they become worried about retirement, Zandi said. In contrast, they aren't as eager to boost spending when the stock market is rising because the bulk of their investments are

held in their nest eggs, he said.

Wealthy consumers, who have large stakes in the stock market and make up a substantial share of consumer spending, could also reduce their spending, said Danielle DiMartino Booth, founder of Quill Intelligence and a past adviser to former Dallas Fed President Richard Fisher. This could lead to reduced sales of luxury goods and lower spending on hotel stays, Booth said.

U.S. consumer confidence dropped slightly last week as fears over the coronavirus

spread and began to push down stock prices, according to Morning Consult's Index of Consumer Sentiment. Consumers' outlook is still more optimistic than it was last fall, when concerns about the trade war were rising, but the report showed consumers are worried the virus could slow global growth and eventually hit their local economies.

A more dramatic hit to spending and the U.S. economy would appear if there were to be cases of coronavirus in major cities such as New York, Washington, D.C., or San

Coronavirus-Infected Monkeys Employed In Bid To find Vaccine

OVERVIEW

U.S. Monkeys Have Been Treated With A New Experimental Drug To Combat The Coronavirus Now Spreading Across The Globe

Compiled And Edited By John T. Robbins, Southern Daily Editor

Monkeys have been infected with a deadly form of coronavirus in a bid to find a successful vaccine for the current COVID-19 epidemic. An experimental antiviral vaccine called remdesivir was found to cure rhesus macaques infected with Middle East respiratory syndrome coronavirus (MERS-CoV).

More than 2,400 have been infected with the strain of the virus, which the European Centre for Disease Prevention and Control estimate has killed 910 humans. The World Health Organisation (WHO) typical case of MERS includes fever, cough, and/or shortness of breath. Pneumonia is common and some people have been known to suffer organ failure or septic shock. Around 35% of those who contract it die.

US National Institutes of Health (NIH) scientists say the wonder drug was found to be successful when given to macaques before they were infected and are now hopeful they can trial it with the COVID-19 (Wuhan) epidemic, which is part of the same family of viruses.

Russia rocket failure may be due to poor investment says expert

Korean workers wearing protective gear transfer a suspected coronavirus patient.

Pneumonia is common and some people have been known to suffer organ failure or septic shock. Around 35% of those who contract it die.

US National Institutes of Health (NIH) scientists say the wonder drug was found to be successful when given to

macaques before they were infected and are now hopeful they can trial it with the COVID-19 (Wuhan) epidemic, which is part of the same family of viruses.

Several other clinical trials of remdesivir for COVID-19 believed to be under way in China.

Meanwhile, some sickly human patients with COVID-19 have already taken the experimental drug in a bid to recover.

The findings of the study, published this month, revealed three groups of monkeys were treated with remdesivir.

Detailing the findings, Drug Target Review report one group of primates, housed at a lab in Hamilton, Montana, received the drug 24 hours before infection with MERS-CoV.

Another group were given the vaccine some 12 hours after infection and another control group did not receive any treatment.

They were then observed for six days, and those treated a day in advance showed no symptoms.

Those treated after infection had less damage to their lungs than the control animals – the fate of which are not known.

The NIH scientists say the results support further clinical trials of remdesivir for COVID-19, which has so far claimed over 2,400 lives worldwide.

In a statement NIH said: "MERS-CoV is closely related to the 2019 novel coronavirus (2019-nCoV) that has grown to be a global public health emergency since cases were first detected in Wuhan, China, in December.

"Remdesivir has previously protected animals against a variety of viruses in lab experiments. The drug has been shown experimentally to effectively treat monkeys infected with Ebola and Nipah

viruses.

"The scientists indicate that the promising study results support additional clinical trials of remdesivir for MERS-CoV and 2019-nCoV. At least two clinical trials of remdesivir for 2019-nCoV are under way in China, and other patients with 2019-nCoV infection have received the drug under a compassionate use protocol."

Believed to have originated in camels the MERS-CoV is transmitted primarily from animals to people, but transmission from people to people is also possible.

Cases identified outside the Middle East, including the US and the UK are people who were infected in the Middle East

and travelled. Approximately 80% of human cases reported by the Kingdom of Saudi Arabia.

RSPCA say: "In the UK, around 3,000 monkeys are used annually. Much of this use is to develop and test the safety and effectiveness of potential human medicines and vaccines. Primates are also used for studying how the brain functions and in research relating to human reproduction."

The demand is said to be growing.

In the US a record 71,317 monkeys were used in labs in 2010 and a similar number were tested on in 2018, when 70,797 monkeys were used.

Virus Expands Outside Of Asia To Europe And Mideast

A man wearing a sanitary mask walks past the Duomo gothic cathedral in Milan, Italy, Monday, Feb. 24, 2020. Italy has been scrambling to check the spread of Europe's first major outbreak of the new viral disease amid rapidly rising numbers of infections and calling off the popular Venice Carnival, scrapping major league soccer matches in the stricken area and shuttering theaters, including Milan's legendary La Scala. (AP Photo/Luca Bruno)

Dr. Liang Wannian, the leader of a team of Chinese experts working with WHO to study the outbreak, said more than 3,000 medical workers had been infected, the majority of them in Wuhan. Liang said while the origins of the virus were still being studied, research suggested that bats may have been one of the hosts and that pangolins, a type of anteater, may have been an intermediate host. Meantime, China announced it would postpone the annual meetings of the National People's Congress, among the most important political gatherings of the year, citing the virus outbreak.

"The past few weeks has demonstrated just how quickly a new virus can spread around the world and cause widespread fear and disruption," said the head of the World Health Organization, Tedros Adhanom Ghebreyesus.

Virus reaches more than 3 dozen countries and 80,000 people

Coronaviruses are a large family of viruses, some of which cause the common cold. Others have evolved into more severe illnesses, such as SARS and MERS.

China believes the virus plateaued there between Jan. 23 and Feb. 2 and has declined since. The team also said the fatality rate in China was between 2% and 4% in Wuhan, the epicenter of the outbreak, and 0.7% outside of Wuhan.

Korea Surge

Medical workers carried a patient infected with coronavirus to a hospital in Chuncheon, South Korea, on Saturday. The country has reported a sharp jump in cases, many linked to a secretive church. (Photo/Yonhap, via Agence France-Presse — Getty Images)

China still has the vast majority of cases, but as it records lower levels of new infections, attention has shifted to new fronts in the outbreak. Chief among them is South Korea, where President Moon Jae-in placed the country under a red alert, the highest level, allowing for "unprecedented, powerful steps" to stem the crisis.

South Korea reported 123 new coronavirus cases on Sunday, bringing its total to 556, and reported a fourth death. The news added to concerns that another Asian country was losing control of the disease and that the window to avert a pandemic was closing.

Asked about the spike in cases in Iran, WHO's emergencies program director, Michael Ryan, cautioned that in the first wave of infections reported from a country, only the deaths may be being picked up and therefore be over-represented.

"The virus may have been there for longer than we had previously suspected," he said.

Ryan said a WHO team would be arriving in Iran on Tuesday and in Italy on Monday.

Who team visits hospitals in China. "What we don't understand yet in COVID-19 are the absolute transmission dynamics," Ryan said, noting that in China there's been a significant drop in cases. "That goes against the logic of pandemic."

Authorities in Iran closed schools across much of the country for a second day Monday. Movie theaters and other venues were shuttered through at least Friday, and daily sanitizing of public buses and the Tehran metro, which is used by some 3 million people, was begun.

The conflicting reports raised questions about the Iranian government's transparency concerning the scale of the outbreak. But even with the lower toll of 12, the number of deaths compared to the number of confirmed infections from the virus is higher in Iran than in any other country, including China and South Korea, where the outbreak is far more widespread. (Courtesy <https://apnews.com/>)

"Does this virus have pandemic potential? Absolutely, yes," Tedros said, but "for the moment we're not witnessing the uncontained global spread of this virus."

"I have spoken consistently about the need for facts not fear. Using the word pandemic now does not fit the facts but it may certainly cause fear," Tedros said, speaking in Geneva.

He said a WHO expert team currently in

Compiled And Edited By John T. Robbins, Southern Daily Editor

(AP) — The new virus took aim at a broadening swath of the globe Monday, with officials in Europe and the Middle East scrambling to limit the spread of an outbreak that showed signs of stabilizing at its Chinese epicenter but posed new threats far beyond. As of Saturday, the virus had spread to 28 countries. Some 1,500 cases had been confirmed outside China; multiple infections in the United States, Italy, Iran and the United Arab Emirates; and one in Egypt, the first to be confirmed on the African continent. The highest death toll outside of China is in Iran, with six as of Saturday.

all those infected having links to Iran. Across the world, stock markets and futures tumbled on fears of a global economic slowdown due to the expanding spread of the virus. The Dow Jones Industrial Average sank more than 1,000 points, its biggest decline in two years. The number of people sickened by the coronavirus topped 79,000 globally, and wherever it sprung up, officials rushed to try to contain it. China reported 409 new cases of the illness on Monday, raising the mainland's total to 77,150. It also announced 150 new deaths for a 2,592 total.

In Italy, authorities set up roadblocks, called off soccer matches and shuttered sites including the famed La Scala opera house. In Iran, the government said 12 people had died nationwide, while five neighboring countries — Iraq, Kuwait, Bahrain, Oman and Afghanistan — reported their first cases of the virus, with

人类起源于非洲？基因学给出了答案

关于人类的起源，无论是进化论，还是神创论，又或者是外星生物创造论都好，无论哪一种也好，一直以来人类都想探寻明白这个问题，想要得到一个确切的答案。

按照主流科学的解释，人类当然是进化而来的。如果从发现的最早的人类化石的年代（440万年前）算起，人类的演化史是相当漫长的。但是让人觉得突兀的是，如此漫长的进化史，人类产生智慧和文明却是非常突然的事儿，好像人类一下子就有了文明。这个时间点卡在了差不多20万年到10万年前，也就是智人演化的阶段。几百万年甚至更久与10万年上下的跨度，确实太不成比例了，这也是为什么有些人会认为人类的智慧出现的太突然，并支持外星生物创造论的原因之所在。

此外，还有一点也非常值得怀疑，那就是科学界对于人类起源问题的一个初步判断，就是人类在大

概700万到600万年前起源于非洲，而现代人类是在大概20到15万年前起源于非洲，而大概在10万年前走出了非洲，并完全取代了其他地区的古人种。这一说法自1987年被提出来之后一直占据主导地位是因为在分子生物学上有诸多的证据支持这一说法。

然而，这一说法其实一直都备受争议，特别是随着考古学的进展，越来越多出土的人类化石不断地挑战着这一说法的科学性。所以，关于人类起源于非洲的假说一直以来都是一个非常有争议性的话题。

其实，真正起到破开云雾作用的并非考古学上的证据，而是基因学在研究人类起源上的突破。

早在1995年的时候，美国圣路易华盛顿大学的坦普莱顿教授就设计了一套计算机程序，用来分析全球各地人口的DNA系列，进而找出人种之间的基因关系。

这套系统经过演算后发现，人

类曾经出现过三次“走出非洲”的迁徙，时间跨度从直立人到智人。并且确认了当时直立人走出非洲，与各地的人类发生了广泛的基因交换。

这一发现证明，并非是从非洲出走的现代智人取代了各地的古人种，而是一次次与各地的人类进行了融合。或者换句话说，人类进化的过程实则是不断交融的过程。

这也就解释了为什么人种之间会有如此大的差别，比如肤色、五官、轮廓、体型等等，与其说这仅仅是进化的结果，不如说人类本来就是多地起源更可信一些。当然，不同地区人类的相互交融和基因突变对于人类的演化也起到了非常重要的作用。

当然，在利用基因学探寻人类起源的问题上还仅仅是一个开始，相信随着研究的不断深入，终有一日人类可以揭开自身起源的神秘面纱，真正了解到我们从何而来。

史前人类很强壮？科学家：或许并非如此

当人们谈及史前人类时，一定会联想到电影中一群体型健硕的史前人类围捕猛犸等大型动物的镜头，他们应当是擅长奔跑、身体强壮的史前人类，目前

科学家最新一项研究表明，事实或许与人们想象的相差较大，人们对史前人类的印象是身体健康、体型匀称，但实际上他们可能是“老幼病残”，他们的相

貌看上去像是饱受战争的摧残。英国约克大学考古学家佩妮·斯皮金斯(Penny Spikins)在英国科学节上表示，在全球出土的50具尼安德特人骨骸中，大约三分之一的骨骸存在不同程度的残疾，由于尼安德特人经常活动，他们身体健康，但是他们的死亡率非常高，而且遭受许多饥荒，差不多每具骨骸都有

非常艰难。

尼安德特人具有病残特征的一个实例包括“沙纳达人(Shanadar Man)”，他的骨骸在伊拉克境内挖掘，考古学家分析其享年40-50岁，从骨骸分析来看，他的一只胳膊和一条腿有伤残迹象，一只眼睛失明，可能耳朵聋了。

佩妮指出，“沙纳达人”伤残体征可能持续10-15年时间，肯定有其他尼安德特人照顾他的生活，我们很难看到像这样的伤残人会对部落做出什么贡献，早期人类都是流动性很强的群体，他们的生存条件较差，从饥荒时期的牙齿特征可看出这一点，但尽管如此，部落其他人仍会照顾伤残人员的生活。

在另一个考古案例中，法国拉卡佩尔奥克斯圣地区挖掘的一具尼安德特人骨骸表明，其生前患有严重关节炎，必须接受至少6个月的护理，这表明尼安德特人部落彼此团结，互相关爱，他们能够真心地帮助伤残的弱势群体。

佩妮说：“因此人类最早的医疗保

健证据比我们所认为的更早，通过考古证据，我们发现17个尼安德特人在患病和受伤期间得到同伴的照顾。”

如果真实还原尼安德特人当时的生存现状，他们看上去会是参加过战争吗？是的，他们的真实状况可能与博物馆陈列的模型不同，从外貌上看，尼安德特人都像参加过战争，多数是身体状况不佳的老幼病残。

佩妮指出，博物馆有责任反映真实的早期人类生活状况吗？从某种程度上讲，身体伤残是早期人类存在的客观问题，现今人们在博物馆看到伤残的早期人类，会感到不适，但早期人类的状况的确如此，这是无法回避的事实。

大约40万年前，原始人类演化为两支，一支是尼安德特人，他们最早离开非洲大陆；另一支是继续生活在非洲大陆的原始人类，后期逐渐演化为智人(人类共同的祖先)，现今欧洲一些地区仍有尼安德特人的基因组，但最终由于某些因素，尼安德特人在大约3万年前灭绝消失。

佩妮说：“因此人类最早的医疗保

现代汽车提供三年新车免费保养服务

购买或租赁的2020新车将享有长达三年或是36,000哩的免费保养服务

作为承诺为客户提供更好服务的另一个例子，北美现代汽车现为购买或租赁2020全新车系的顾客提供免费保养服务。该保养服务长达三年或是36,000哩（两者以先到之项目计算），包含按标准间隔时程更换机油与机油滤芯和定期对调轮胎。

北美现代汽车首席客户官 Barry Ratzlaff 表示：「现代汽车一直以来都是一家聆听客户需求的公司，并致力于提供能以最大程度提高价值并简化生活的产品和服务。在全美最佳保养计划的坚实基础上，现代汽车免费保养服务可协助经销商确保车主享有安全感。这些计划，加上为期五年的路边紧急救援服务以及为期三年的Blue Link服务，能够让车主们感到宾至如归。一旦他们加入现代大家庭，就会得到细心照顾。」

在2020年2月1日或之后购买2020全新车系的顾客即可享受免费保养服务。每辆汽车的用户手册中均概述了定期更换机油和轮胎的情况。这些服务包括：

- 按标准间隔时程更换机油与机油滤芯
- 对调轮胎服务

更多关于Blue Link提供服务的详情请见 www.hyundai3yearmaintenance.com。

现代汽车免费保养服务是现代汽车保固计划的最新内容，承诺为买家和车主创造更好的体验。现代保固计划由车主保固（现涵盖免费保养计划）和买家保固计划组成，共同为消费者提供简化购买流程和改善购买服务体验的多种方式。

车主保固计划

- 全美最佳保固计划：10年或是100,000哩的动力系统有限保固、5年或是60,000哩新车有限保固，和7年锈蚀穿孔保固
- 免费保养计划：3年或是36,000哩的更换机油对调轮胎服务
- 路边紧急救援：5年的24小时路边紧急

救援服务

- Blue Link：3年免费Blue Link现代安心连结服务，包括提供紧急救援和车辆保养及诊断提示的Connected Care服务。
- 车辆保固计划：现代汽车对消费者的一

系列承诺，包括便捷的预约服务、经工厂培训的技术人员、免费的多点检查、对推荐服务的明确说明，以及对所有已完成工作的总结以及对客户时间的尊重。

买家保固计划

透明价格：参与的现代经销商事先就会在网上刊载库存新车的市场价（MSRP 减去经销商提供的任意折扣），可让买家预先获知车辆的透明价格。这样能节省买家讲价的时间，并且可消除因广为宣传的优惠没有刊登在经销商官网上而导致的失意感。

灵活试车：买家可经由Hyundai Drive平台对任何新车进行试驾。买家可在该平台通过网上预约、致电，或使用定制APP（只适用于特定市场）的方式联系经销商。选定的试驾车辆可以送至买家自行选择的地点，例如住宅、办公室，或咖啡厅。

精简购车：买家可在访问经销商前上网完成大部分文件，节省处理纸本文件的时间。该服务包括贷款申请、获得信贷批准、计算预估付款，和以旧换新评估。

三天换车无后顾之忧：任何对已购车辆不满意的顾客可在三天之内退回车辆并另换新的现代汽车。该条款在经销商检查无误和自购买或租赁之日起行驶距离不足300哩的情况下有效。该服务可使买家购车时无后顾之忧。请至 www.hyundaiusa.com/shopperassurance 查看关于兑换政策的完整条件和条款。

现代汽车对于创新的客户服务内容和品质拥

有悠久的历史，例如全美最佳保固计划、经济衰退时期的失业保护计划、以旧换新的价值担保、买家保固等。这些项目都诠释出现代致力于为客户提供更好服务的精神。

北美现代汽车

北美现代汽车旨在借由销售的每一台车，为客户提供设计、工程，以及价值上的卓越体验。现代富有尖端科技的房车、休旅车，以及替代能源车款皆具有现代保固计划的背书，这是我们让顾客放心的承诺。现代汽车全车系在全国超过八百三十间经销商销售，并且大部分借由在美国本土的工厂制造，像是位于阿拉巴马州的现代汽车制造厂。北美现代汽车的总部位于加州喷泉谷，为韩国现代汽车集团的分公司。

揭开女人变老的秘密

岁月悄悄地流逝，不知不觉中，皱纹蹑手蹑脚地爬上了你的脸庞，这是多么令人苦恼。42岁的葛薇在朋友的眼中竟然跟50、60岁的大妈一样！年轻时温柔美丽的她现在完全变了，脸色暗黄，皱纹越来越明显，而且从去年开始就出现了明显的更年期症状：心烦意乱，脾气也渐长，脸上的斑也越来越明显，月经也不正常了，而且天天喊累，浑身没劲，真跟个老太太似的。朋友们看着都替她着急。后来到医院检查才知道她不但提前进入更年期，忙问医生自己该怎么办？医生说女人老的罪魁祸首是体内雌激素分泌不足，女人要是想永葆青春的话，就得想法保住渐渐减少乃至消失的雌激素，月经停止得越晚越好。

雌激素赋予女人第二性征，比如乳房的丰满，月经按时来潮等等。也就是说，雌激素可以使皮肤中的水分保持一定含量，使皮肤看上去柔嫩、细腻。所谓更年期，就是雌激素的分泌量渐渐减少，到月经终止时降到最低，这个时候大约是女性50岁左右，此时的女性完全失去了生育功能。

事实上，从45岁开始，女人就进入了更年期前期，卵巢机能逐渐下降，雌激素分泌减少，皮肤的含水量也随之递减，皱纹慢慢出现，皮肤失去以往光泽和弹性。更年期来临前后，还有一点最常见的变化是脸面一阵阵轰热潮红，情绪激动，不能控制，种种这些都是卵巢分泌雌激素减少的缘故。这个时候，补充雌激素是当务之急。人为的补充雌激素可能诱发一些癌症。比如乳腺癌和子宫内膜癌等。西方医学的先父希波克拉底说：人类离自然越远疾病就越近，离自然越近健康也就越近。他的这一古训已经体现在现代人回归自然的健康准则之中。

缓解更年期的各种症状可以通过天然草本补充疗法来加以改善。天然草本补充疗法是以天然草本为主要原料，提取有效成分，直接作用于卵巢和身体各系统、器官组织细胞，作用温和、安全无毒。由加拿大VIKER公司推出的红人归胶囊(Sangel)，是由多种名贵中药组成的纯天然保健产品，可以修复和营养萎缩的卵巢，改善卵巢微循环网，使卵

巢重新产生圆润的卵泡，恢复子宫机能保持旺盛的雌激素分泌能力。恢复体内旺盛的雌激素分泌水平，从而缓解更年期的多种症状。服用红人归，改善更年期症状属于天然草本补充疗法，可以避免由于雌激素替代疗法带来的患癌症的风险，消费者可以放心选用的。服用红人归胶囊(Sangel)吧，一种天然草本补充疗法，它会让您卵巢恢复到年轻时的状态，永葆青春！

红人归胶囊(SANGEL)是加拿大卫生部唯一批准的用于女性更年期的产品，加拿大卫生研究院十九年质量疗效追踪确认红人归胶囊(Sangel)是目前世界范围内最安全、最有效、最科学的产品。

红人归胶囊(Sangel)针对以下症状最有效

闭经、痛经、月经不调等经期综合症；头晕目眩、注意力不集中、失眠健忘、情绪紧张等症；潮热、出汗、胸闷、心悸、气短等症；皮肤干燥、弹性减退、光泽消失、皱纹增多等症；脱发、色斑、老年斑等症；性欲衰退，阴道分泌物减少，性交时出现疼痛感等症

拥有红人归胶囊(Sangel)，不仅让您做个人羡慕的魅力女人，更是对您一生的精心呵护！

等待，**小Q**是最温情的陪伴

小狗的陪伴，温暖过新春！

Little Q

等待，是最温情的陪伴

电影《小Q》和2004年日本电影《导盲犬小Q》都改编自日本作家石黑谦吾的小说《再见了，可鲁》。起初本来没打算看这部电影，但后来了解到电影拍摄时，剧组对狗，尤其是演员布丁有着最大程度地呵护与尊重，这种态度要比电影的本身更让人动容，而且所有主创为了科普导盲犬的相关知识，在内地坚持了很多场路演。说句实话，的确电影超出了预期，原著初衷很好，电影故事煽情催泪，本土化的改编很接地气，还有电影片尾真实采访盲人和导盲犬段落凸显诚意。
