Catastrophic floods leave over 120 dead in western Europe, many more still miss-

Aerial photo taken on July 17, 2021 shows a flooded area in Roermond, Limburg, a province in the southeastern part of the Netherlands. Devastating flash floods due to intense rainfalls have swept through several western European countries in the past few days, killing more than one hundred and causing damages. The Dutch government has formally assessed the flood in Limburg as a disaster, allowing victims to obtain clarity about whether their damage will be reimbursed by the government if their insurance does not cover it. (Jelle Aerts/Lofi-original/Handout via Xinhua)

BRUSSELS/BERLIN/GENEVA, July 16 (Xinhua) -- Devastating flash floods due to intense rainfalls have swept through several western European countries in the past few days, killing more than one hundred and causing damages.

Some countries in Western Europe received up to two months worth of rainfall in two days, with Germany, Belgium, the Netherlands and Luxembourg strongly affected, the World Meteorological Organization (WMO) reported on Friday.

In parts of western and southern Germany, towns and communities were hit by catastrophic flash floods after heavy and continuous rainfall this week.

As of Friday afternoon local time, the death toll climbed to 103 in the country, with many more people still missing, according to local authorities. The federal states of North Rhine-Westphalia and Rhineland-Palatinate were hit particularly hard, with 43 people and 60 people killed respectively.

A large number of people are still missing. The district of Ahrweiler alone currently estimates about 1,300 missing people, while around 3,500 are being treated in care facilities.

Germany's Ministry of Defence has issued a military disaster alert on Friday, deploying more than 850 soldiers for rescue work and the number is increasing.

"Extreme precipitation such as the heavy rains that flooded parts of western Germany this week is likely to become more frequent due to global warming," said German expert Stefan Rahmstorf, head of Earth System Analysis at the Potsdam Institute for Climate Impact Research (PIK).

In Belgium, a national day of mourning has been set for July 20 for the victims of the severe weather in recent days. Twenty-one people died and 18 were reported missing on Friday after flash floods that saw rivers burst their banks in the south and east of the country.

In the town of Verviers, near the city of Liege, disastrous floods submerged the city center, upturning cars and damaging homes and shops along the high street.

The heavy downpours in the Belgian provinces of Luxembourg, Namur, Liege and Limbourg match what climate models predict for when the Earth warms up, suggesting direct links with global warming, the Belgian weekly Le Vive reported on Friday.

In neighboring Netherlands, 10,700 people have been evacuated in Venlo in the north of the southern Dutch province of Limburg on Friday, as a precaution due to the high water level and the fear of flooding.

The Dutch government has formally assessed the flood in Limburg as a disaster, allowing victims to obtain clarity about whether their damage will be reimbursed by the government if their insurance does not cover it.

Dutch King Willem-Alexander visited the city and called the situation in Limburg "heartbreaking."

In Switzerland, maximum flood warnings have been issued in central parts of the country due to persistent rainfall. As of Friday, Lake Lucerne, Lake Thun and Lake Biel have remained at the highest flood warning level (5) after continued and intense rainfall throughout the week.

The Swissinfo website reported that the major cities such as Basel and Bern are also facing high flood risks, with the River Aare reaching a flow rate of 540 cubic meters per second, nearing the 600 level recorded in the major floods of 2005.

France's meteorological service warned on Friday that the continuous rainfall is soaking the soil, putting France at risk of flooding. Currently, 13 provinces in northern and eastern France have been placed on orange alert for floods.

The European Union's Civil Protection Mechanism has been activated to tackle the heavy floods

Tony Hu's Sze Chaun Cuisine Comes To Texas

The very first Lao Sze Chaun restaurant opened in 1998 in Chicago's Chinatown. The owner and chef Tony Hu strongly prides himself on providing transitional Sichuan cuisine with high quality ingredients. In 1999, his restaurant was recognized by The Chicago Tribune as "one of the best" recovering, and therefore, a rating that was considered a prominent accomplishment for Chinese restaurants.

Today, Tony Hu has opened his first restaurant in Katy, Texas. Many Chinese community leaders were in attendance and joined him at his grand opening and warmly welcomed him to Texas.

Over the last several centuries, Chinese cuisine was brought to the world by many Chinese immigrants. Of course, in North America the Chinese restaurants do not only provide delicious food, but the dining experience also represents Chinese culture.

Before I came to America, I had been reading restaurant stories written by Dr. Ling Chao. His book mentioned the interesting stories of how young students worked in the restaurants. After many of us came to America, many of us had similar experiences.

Today we have 11,000 people moving to Texas every day. Never before has the economy boomed liked it is going today. Housing is in high demand and many new businesses are moving to Texas.

We all welcome Tony and his first restaurant in Katy. He said many more will come.

We are so proud of him. His is the immigrant success story representing many of us who came over here to work very hard and make big contributions to our country.

Texas is the land of opportunity and many Asian-Americans chose it as their new home. We appreciate the opportunity in this country and we love our nation.

Scientists Believe The Army's Vaccine May Combat Deadly Variants And Even Future Pandemics

Army's Own Vaccine That Could Fight COVID Variants Begins Human Trials

Soldiers prepare to administer the COVD-19 vaccine at Fort Hood, Texas, on Feb. 20, 2021. (Photo/Staff Sgt. Daniel Herman/Army)

Compiled And Edited By John T. Robbins, Southern Daily Editor

As more than 100 million Americans were needled and inoculated against COVID-19 with doses produced by pharmaceutical powerhouses like Pfizer and Moderna, a scrappy team of scientists in an Army lab just outside the nation's capital quietly continued manipulating proteins, testing monkeys and working to conceive a vaccine of the future.

The product born of their experience, reason and labor was injected into its first human test subject on Tuesday.

"We want to win this battle, but we also want to win the long war," said Dr. Kayvon Modjarrad, who leads the vaccine effort as director of the emerging infectious diseases branch of the Walter Reed Army Institute of Research (WRAIR) in Silver Spring, Maryland.

Once the virus was sequenced in January 2020, he and his then modest team of 10 strategized and took on a blistering 24/7 effort, whittling a selection of two dozen prototypes down to a single vaccine candidate within six months.

Over the last decade Modjarrad also led the Army's vaccine efforts for Ebola and the Zika virus and was principal investigator of its campaign against MERS, a disease itself caused by a coronavirus. And though WRAIR is the oldest biomedical research institute within the Department of Defense, the emerging infectious diseases branch is still young.

Dr. Kayvon Modjarrad sits at his desk adorned with a 3-D model of the vaccine he co-invented. Modjarrad is the director of the emerging infectious diseases branch of the Walter Reed Army Institute of Research (WRAIR). (Photo Matt Seyler, ABC News)

"We're not Apple now -- we're Apple 40 years ago, in the garage," Modjarrad said with a laugh.

Despite the frantic pace, Modjarrad -- who co-invented WRAIR's eventual vaccine candidate -- knew it wouldn't be the first to the public.

"This one takes a little bit longer in designing and then manufacturing," he said.

From the beginning his focus was on next-generation threats, ones that could be thriving in unknown bat caves as you read this sentence, waiting to make contact and proliferate inside humans.

"Even though we got the (available vaccines) within a year, how many hundreds of thousands of people in the U.S. and how many millions of people globally lost their lives before the vaccine was even available?" Modjarrad asked ABC News' Bob Woodruff during an exclusive visit to the lab last week. "We want to get to a point where the vaccine is already out there -- maybe already in people's arms -- before the next variant, next stream, next species of coronavirus occurs."

The Walter Reed Army Institute of Research (WRAIR), founded in 1893, is located in Silver Spring, Md. (Photo/Matt Seyler/ABC News)

The three vaccines already authorized for use in the U.S. work by feeding the body genetic instructions to create the spike protein that is found on the surface of the virus. Once the body creates the protein, the immune system is alerted and begins forming antibodies. It's a safe way of triggering a similar immune response as one a person would have after contracting the actual virus.

The WRAIR vaccine skips both the instruction and creation steps, bringing the already-formed spike protein straight into the arm along with an immune-boosting adjuvant compound, quickly starting the antibody response.

And unlike other protein-based vaccines being tested, the WRAIR candidate presents virus-looking nanoparticles, each with a consistent array of 24 spike proteins arranged in small bouquets of three protruding from a ferritin base.

"There's a lot of theories as to why something presented in this fashion gives such a good immune response, but in some ways you can see it looks like a virus as well," Modjarrad said. "So it has some properties that educate the immune response in a way that it gives you a very strong, but also a broad response."

Test results with thousands of mice and dozens of monkeys have been promising.

A researcher works on coronavirus vaccine development at the Walter Reed Army Institute of Research in Silver Spring, Md., April 28, 2020. (photo/Matt Seyler/ABC News)

"We think (other) vaccines are probably going to be protective against new variants, but they might be decreased in their protection," Modjarrad said. "What we've seen with our vaccine so far in animals ... is that the vaccine is not decreased in effectiveness against those variants at all. And it is effective against other coronaviruses like SARS-1. So what we have developed now is starting to look like a pan-SARS vaccine ... and we're going to start testing everything in between."

If successful in clinical trials, WRAIR's vaccine could become common among the U.S. population, possibly as a booster for already-vaccinated people.

Being a military lab, practicality was a primary design concern, which could incidentally give their product global appeal. In particular, it is highly stable and doesn't require special freezing. "That means you can put it in a cooler on the back of a motorcycle in the Amazon or the Sahara or wherever, and that vaccine should still be OK," Modjarrad said.

But the "if" remains. Though the WRAIR scientists brim with confidence in conversation, they are soberly aware that their product has yet to be proven in humans.

"They have some very early data to suggest in the laboratory that the immune response evoked by this vaccine will cover a variety of different strains," said Dr. William Schaffner, a professor of preventative medicine and infectious diseases at Vanderbilt University in Nashville. "Whether that translates actually into protection in people against the variety of strains -- that remains to be determined. Long journeys, first steps."

Cpt. Aaron Sanborn, RN, (far right), discusses the vaccination process with Francis Holinaty (left) during the first day of the vaccine entering clinical trials at the Walter Reed Army Institute of Research's Clinical Trials Center, April 6, 2021. (Photo/Walter Reed Army Institute of Research)

On Tuesday, retired Army Col. Francis Holinaty stepped up to be the first to be injected in WRAIR's Phase 1 trial.

"Over my 30-year career I have served in many places around the world in many different operational settings, some more arduous than others, some more hazardous than others," Holinaty said. "And one day I'm on the Metro, and it's almost as if it was fate -- I just looked up and I saw a poster, and I saw Walter Reed, and it took me a while to process what this poster was saying. And when it dawned on me that they were trying to do a trial for the COVID-19, I saw this as another opportunity to just serve."

Holinaty can't be sure whether he received a dose of the vaccine or a placebo, but said afterward that he felt fine. He wanted people to know that there are many ways to fight the pandemic.

"You don't have to be in the military, you don't have to be a first responder, but you can help all," he said. "And if you have a calling to help people this is just one of the ways you can do it." (Courtesy abcnew.go.com)

Swine Flu Virus With Human 'Pandemic Potential' Found In Pigs In China

The new flu strain is similar to the swine flu that spread globally in 2009

Compiled And Edited By John T. Robbins, Southern Daily Editor

A swine flu virus emerged recently in China and is carried by pigs, but can infect humans, it has been reported. The researchers are concerned that it could mutate further so that it can spread easily from person to person, and trigger a global outbreak.

While it is not an immediate problem, they say, it has "all the hallmarks" of being highly adapted to infect humans and needs close monitoring.

As it's new, people could have little or no immunity to the virus.

The scientists write in the journal Proceedings of the National Academy of Sciences that measures to control the virus in pigs, and the close monitoring of swine industry workers, should be swiftly implemented.

Pandemic threat

A bad new strain of influenza is among the top disease threats that experts are watching for, even as the world attempts to bring to an end the current coronavirus pandemic. The last pandemic flu the world encountered - the swine flu outbreak of 2009 - was less deadly than initially feared, largely because many older people had some immunity to it, probably because of its similarity to other flu viruses that had circulated years before.

Nasal swabs from more than 30,000 pigs in China over 7 years found an increase in an avianlike influenza virus that has swapped genes from several strains.

That virus, called A/H1N1pdm09, is now covered by the annual flu vaccine to make sure people are protected. The new flu strain that has been identified in China is similar to 2009 swine flu, but with some new changes.

So far, it hasn't posed a big threat, but Prof Kin-Chow Chang and colleagues who have been studying it, say it is one to keep an eye on.

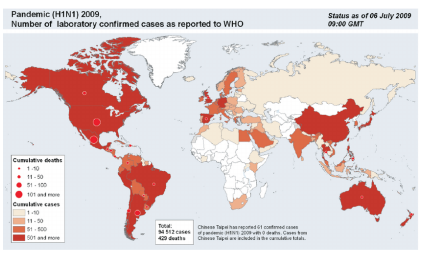
How worried should we be?

The virus, which the researchers call G4 EA H1N1, can grow and multiply in the cells that line the human airways. They found evidence of recent infection in people who worked in abattoirs and the swine industry in China when they looked at data from 2011 to 2018.

Current flu vaccines do not appear to protect against it, although they could be adapted to do so if needed. Prof Kin-Chow Chang, who works at Nottingham University in the UK, told the BBC: "Right now we are distracted with coronavirus and rightly so. But we must not lose sight of potentially dangerous new viruses."

While this new virus is not an immediate problem, he says: "We should not ignore it."

A World Health Organization spokeswoman said: "Eurasian avian-like swine influenza virus are known to be circulating in the swine population in Asia and to be able to infect humans sporadically. Twice a year during the influenza vaccine composition meetings, all information on the viruses is reviewed and the need for new candidate vaccine viruses is discussed. We will carefully read the paper to understand what is new.



"It also highlights that we cannot let down our guard on influenza; we need to be vigilant and continue surveillance even during the COVID-19 pandemic." (Courtesy https://www.bbc.com/)

What the world doesn't need now is a pandemic on top of a pandemic. But a new finding that pigs in China are more and more frequently becoming infected with a strain of influenza that has the potential to jump to humans has infectious disease researchers worldwide taking serious notice.

When multiple strains of influenza viruses infect the same pig, they can easily swap genes, a process known as "reassortment."

The new study, published today in the Proceedings of the National Academy of Sciences, focuses on an influenza virus dubbed G4. The virus is a unique blend of three lineages: one similar to strains found in European and Asian birds, the H1N1 strain that caused the 2009 pandemic, and a North American H1N1 that has genes from avian, human, and pig influenza viruses.

The G4 variant is especially concerning because its core is an avian influenza virus—to which humans have no immunity—with bits of mammalian strains mixed in. "From the data presented, it appears that this is a swine influenza virus that is poised to emerge in humans," says Edward Holmes, an evolutionary biologist at the University of Sydney who studies pathogens. "Clearly this situation needs to be monitored very closely."

Influenza viruses frequently jump from pigs to humans, but most do not then transmit between humans. Two cases of G4 infections of humans have been documented and both were dead-end infections that did not transmit to other people.

"The likelihood that this particular variant is going to cause a pandemic is low," says Martha Nelson, an evolutionary biologist at the U.S. National Institutes of Health's Fogarty International Center who studies pig influenza viruses in the United States and their spread to humans. But Nelson notes that no one knew about the pandemic H1N1 strain, which jumped from pigs to people, until the first human cases surfaced in 2009. "Influenza can surprise us," Nelson says. "And there's a risk that we neglect influenza and other threats at this time" of COVID-19.

As part of a project to identify potential pandemic influenza strains, a team led by Liu Jinhua from the China Agricultural University (CAU) analyzed nearly 30,000 nasal swabs taken from pigs at slaughterhouses in 10 Chinese provinces, and another 1000 swabs from pigs with respiratory symptoms seen at their school's veterinary teaching hospital. The swabs, collected between 2011 and 2018, yielded 179 swine influenza viruses, the vast majority of which were G4 or one of five other G strains from the Eurasian avianlike lineage. "G4 virus has shown a sharp increase since 2016, and is the predominant genotype in circulation in pigs detected across at least 10 provinces," they write.

Sun Honglei, the paper's first author, says G4's inclusion of genes from the 2009 H1N1 pandemic "may promote the virus adaptation" that leads to human-to-human transmission. Therefore, "It's necessary to strengthen the surveillance" of pigs in China for influenza viruses, says Sun, also at CAU.

The new study offers but a tiny glimpse into swine influenza strains in China, which has 500 million pigs. While Nelson thinks the predominance of G4 in their analysis is an interesting finding, she says it's hard to know whether its spread is a growing problem, given the relatively small sample size. "You're really not getting a good snapshot of what is dominant in pigs in China," she adds, stressing the need for more sampling in the nation's pigs.

In addition to stepping up surveillance, Sun says it makes sense to develop a vaccine against G4 for both pigs and humans. Webster says at the very least, the seed stock to make a human vaccine—variants of a strain that grow rapidly in the eggs used to make a flu vaccine—should be produced now. "Making the seed stock is not a big deal, and we should have it ready," Webster says. (Courtesy https://www.sciencemag.org/)

精彩講座盡在聯合健康保險
七月21日講座:「領取兒童家庭紓困金方法」

(本報休斯頓訊) 聯合健康保險致力爲您提供更好的體驗、更有價值的服務及更健康的生活，每月均有專題講座，7-8月份在休士頓爲您帶來以下的精彩活動!

聯合健保亞裔資訊中心將舉辦「領取兒童家庭紓困金方法」國語講座，邀請了中華文化服務中心代表爲民衆講解申請資格、申請方法、及其他注意事項。日期及地點如下: 7月21日(週三)上午10時，於聯合健保休士頓亞裔資訊中心(10613 Bellaire Blvd., Suite A-250, Houston, TX 77072) Saigon Houston Plaza二樓。

此外，8月5日(週四)上午10時於相同地點將舉辦「支付紅藍卡費用的方法」講座，由聯合健康保險代表協助您瞭解聯邦醫療保險免保費計劃，其申請資格、收入上限、申請方法等。

想知道是否合資格領取新一期兒童家庭紓困金？又或者是否合資格申請紅藍卡免保費計劃？歡迎社區民衆踴躍參與聯合健保專題講座。

華語查詢及報名專線：1-866-868-8988(辦公時間: 週一至週五，上午9時至下午5時)。以上講座將於線上同步直播，請使用Zoom meeting ID: 824 699 7872登入。

聯合健康保險

聯合健康保險專業親切的華語團隊在社區爲當地居民提供一站式服務，從諮詢、選擇適合您的健保計劃，至一對一會員服務。無論您是剛邁入65歲、是紅藍白卡持有者，我們都歡迎您光臨聯合的服務中心，瞭解全面資訊，以選擇最適合您的健康保險計劃。

聯合健保休士頓亞裔資訊中心地址: 10613 Bellaire Blvd., Suite A-250, Houston, TX 77072，Saigon Houston Plaza二樓。

電話:1-866-868-8988(辦公時間: 週一至週五，上午9時至下午5時)

HCC社區大學提供數百門精選課程
爲升學及職涯準備 在職場更上層樓

(本報休斯頓報導) HCC課程的設計針對不同的人群，不論是應屆學生、還是尋求成人教育的在職人士，都是HCC的服務對象。社區大學的課程培訓人才，來滿足不同行業的技能需求，讓學生畢業後找到工作、或在HCC獲取學分和副學士學位後進入四年制大學在兩年內完成學士學位。

社區大學的好處，是讓高中畢業之後沒有上四年制大學的這一群學生能夠不離開教育，可以有繼續學習的場所，能夠提升並且有改善與改變生活的機會，讓學生達成更好的人生目標。

HCC社區大學課程設置類別:

1. 四年制大學轉學組: 學生在HCC畢業後，取得副學士學位。想繼續深造就讀的學生，可以轉念四年制大學，HCC學分普遍被四年制大學承認，可直接報讀大三的課程，繼續大學課程的後兩年，以取得學士學位。

2. 副學士職業組: 學生在HCC畢業後，直接找工作上班，因爲學有所長，求職相對容易。

3. 短期專業證書 (Certificate) 組: 提供一邊工作、一邊在HCC進修的機會，提升專業水平，在HCC取得證書後可以在職場更上層樓，與行業需求最新的技術相接軌。對現有工作不滿意的人，若是希望轉換行業，HCC提供大量高新技術課程，能提升學生的求職競爭力，換取更好的工作。舉例來說，目前的三維印製（3D printing）以及網絡安全（Cybersecurity）很紅火，學生來HCC進修，拿了證書之後，立刻可以開闢新的職業機會，獲取高薪。2020年，HCC成爲德州第一家、也是唯一的一家社區大學創設了人工智能(Artificial Intelligence或簡稱AI)副學士學位課程。

在西南區的斯塔佛校園（Stafford Campus），有HCC和美國勞工部聯手建立的高級製造業學徒項目，學生一邊在HCC學習一邊經由學徒項目在製造業類公司當帶薪學徒，等一畢業有了證書，就能成爲正式公司職員，薪水也大爲提高。另外，HCC有夜校、以及週末的課程，讓不同人群選擇適合的時間。

社區大學的優點

社區大學的優點有哪些？首先是學費便宜很多，學生在HCC上頭兩年，然後轉到一般大學繼續就讀，這樣子學費可以省很多。例如，若是住在HCC校區範圍內的學生，在休斯頓大學修一門課的費用可以在HCC修6門課。如果是HCC校區範圍之外，則可以修3門課。其次，優點還有課程多樣化(更多實用課程的選擇)，如果想就業，可以選擇職業訓練及專業技能課程，上課時間更有彈性，且注重理論與實務的結合，這些好處都讓不少人考慮進HCC就讀。

在師資部分，許多HCC的教授也在其他大學教授，課程內容都一樣，教學同樣的紮實，而花費卻更少。

HCC對於符合資格的學生，提供免學費課程，詳情可洽713-718-5381。亦有爲所有公衆開設的免費網上課程，詳情可洽713-718-5350。還有爲50歲以上年長者開設的免費網上課程，詳情可洽713-718-5350。

報名入學網址: https://hccs.edu/virtuallobby及電話713.718.2000。

雄鹿多點開花險勝太陽贏得賽點
再胜一戰NBA稱王

【美南新聞泉深】2020-21賽季NBA總決賽菲尼克斯太陽與密爾沃基雄鹿的第5場比賽於星期六（7月17日）晚上在太陽隊主場舉行。全場打完，雄鹿隊多點開花以123:119險勝太陽隊，總比分3:2領先，拿到總冠軍賽點。若週二（7月20日）回到密爾沃基主場再勝一戰，將第二次獲得NBA總冠軍，在NBA稱王。

比賽最後的關鍵時刻，密爾沃基雄鹿隊的朱·霍樂迪從德文·布克手中搶到關鍵一球，空中接力傳球給揚尼斯·安特托昆博（字母哥），後者扣籃得分，以122:119領先。

安特托昆博得到32分、9個籃板和6次助攻，克裏斯·米德爾頓得到29分，霍樂迪得到27分和13次助攻。

本場比賽雄鹿隊在NBA總決賽曆史上經曆了最好的投籃之夜，從上半場落後16分後脫穎而出，加上嚴密的防守，連續第叁場贏得了比賽。

他們週二回到密爾沃基雄鹿隊的主場，若獲勝，將爲球隊贏得第二個總冠軍，也是自1971年後50年以來的第一個NBA總冠軍。

阿德托昆博在賽後採訪中說：“還有一場球賽，還有一場球賽，我們必須繼續打好籃球。”

太陽隊的布克得到40分，這是他連續第二場獲得40分的比賽。但是隨著太陽隊在比賽還剩16秒時反彈並有機會反超比分時，他帶球到了前場，霍樂迪將球從他手中搶走了。安特托昆博沖刺到他的右邊，霍樂迪拋了一個完美的吊球傳球，希臘怪胎猛地撲上去扣籃，而且造成克裏斯·保羅對他犯規，以122:119的比分領先。安特托昆博罰球不中，但雄鹿隊搶下籃板，球傳給了米德爾頓，太陽隊造犯規，米德爾頓兩罰一中，最終以123:119獲勝。

雄鹿隊的進攻就是故事，他們在第二節後段和第叁節前段，45投32中，在那段時間內他們以79:53領先太陽隊。

密爾沃基雄鹿隊成爲第一支在NBA總決賽中先在客場0:2落後，回到主場兩戰全勝，又在客場獲勝的球隊。再贏一場，他們將贏得NBA總冠軍。若雄鹿隊獲得NBA總冠軍，將是第五支在總決賽中以0:2落後又獲得NBA總冠軍的球隊。

太陽隊的保羅得到21分和11次助攻，德安德烈·艾頓得到20分和10個籃板。但是太陽隊錯過了他們想獲得第一個NBA總冠軍的機會。若想獲得NBA總冠軍，星期二客場必勝，而且星期四還要回到主場搶七大戰中也要獲勝，看來情況不太妙。

在比賽還剩9分鍾時，霍樂迪的上籃得分讓雄鹿隊以108:94的比分保持領先狀態，但太陽隊在最後幾分鍾發動了進攻。

在比賽還剩不到3分30秒的情況下，太陽隊落後10分，但布克投中3分，接著保羅又投籃命中3分，在比賽還剩56秒時將比分縮小到120:119。雄鹿霍樂迪跳投不中，太陽隊搶到籃板，球傳給了布克，有機會反超，可惜霍樂迪從布克手中搶到球，這一拋傳對太陽隊是致命一擊。
